GEN 3.2 AERONAUTICAL CHARTS

1. RESPONSIBLE SERVICE

Aeronautical Charts for the territory of Ireland are published by

Post: The Irish Aviation Authority,
The Times Building
11-12 D'Olier Street
Dublin 2
D02 T449
Ireland

Phone: + 353 1 671 8655

Fax: + 353 1 679 2934

Email: info@iaa.ie

URL: http://www.iaa.ie

Charts based on ICAO documents: Annex 4, Doc 8697
Differences to these provisions are detailed in GEN 1.7
Topographical information is reproduced under licence by permission of Ordnance Survey Ireland.
Charting service is available during Office hours 0930-1730 Local Time.

2. MAINTENANCE OF CHARTS

2.1 Aeronautical Charts included in the AIP are kept up to date by amendments to the AIP. Significant amendments or revisions in aeronautical information may be promulgated by NOTAM or Aeronautical Information Circular, as appropriate.

2.2. Corrections to Aeronautical Charts are promulgated as hand amendments to the AIP and listed in Sections GEN 0.5 and GEN 3.2.8. Items of information found after publication to have been incorrect at the aeronautical information date are corrected immediately by NOTAM if they are of operational significance.

3. PURCHASE ARRANGEMENTS

3.1 VFR Chart Scale 1:500,000

The Irish Aviation Authority has produced a visual flight rules (VFR) aeronautical encapsulated A4 folded chart Scale 1:500,000. This chart is for VFR navigation within the boundaries of the Shannon FIR. In addition to aeronautical information, the charts provide terrain contours, hydrographic, topographic, cultural and other visual features compatible with legibility at the scale of the chart - this information is supplied by Ordnance Survey Ireland and/or Ordnance Survey Northern Ireland. It is available to order at a cost of €30.00 including VAT from:

Post: OSI,
Map Sales Shop,
Phoenix Park,
Dublin 8,

Phone: + 353 1 802 5379

URL: https://store.osi.ie/index.php/paper-products/aeronautical-charts.html

3.2 VFR Airspace Chart Scale 1:500,000

The Irish Aviation Authority has produced a visual flight rules (VFR) aeronautical airspace chart Scale 1:500,000.
This chart is for VFR navigation within the boundaries of the Shannon FIR.
It is available free to download from the IAA Web Site,

URL: https://www.iaa.ie/commercial-aviation/airspace/aeronautical-charts

3.3 VFR Chart Scale 1:250,000

The Irish Aviation Authority has produced a visual flight rules (VFR) aeronautical encapsulated A4 folded chart Scale 1:250,000. It comprises two charts - front and back (East & West, North & South), covering the Shannon FIR. The charts are

for VFR navigation within the boundaries of the Shannon FIR. In addition to aeronautical information, the charts provide terrain contours, hydrographic, topographic, cultural and other visual features compatible with legibility at the scale of the chart - this information is supplied by Ordnance Survey Ireland and/or Ordnance Survey Northern Ireland. It is available to order at a cost of €30.00 including VAT per chart from:

Post: OSI,
Map Sales Shop,
Phoenix Park,
Dublin 8,

Phone: + 353 1 802 5379

URL: https://store.osi.ie/index.php/paper-products/aeronautical-charts.html

All other aeronautical charts are available to download from:-
URL: http://www.iaa.ie/commercial-aviation/airspace/aeronautical-charts

4. AERONAUTICAL CHART SERIES AVAILABLE

4.1 The following series of aeronautical charts are produced

1. Aeronautical Chart - ICAO 1:500,000
2. Aeronautical Chart 1:250,000
3. Instrument Approach Chart - ICAO *
4. Standard Departure Chart - Instrument (SID) - ICAO *
5. Standard Arrival Chart - Instrument (STAR) - ICAO *
6. Visual Approach Chart - ICAO*
7. Aerodrome Chart - ICAO *
8. Aircraft Parking/Docking Chart - ICAO *
9. Aerodrome Obstacle Chart - ICAO Type “A” (Operating Limitations) *
10. Aerodrome Obstacle Chart - ICAO Type “B”
11. Precision Approach Terrain Chart - ICAO
12. ATC Surveillance Minimum Altitude Chart *

(* included in AIP Ireland)

URL: http://www.iaa.ie

4.2 General Description of Series of Charts

4.2.1 Aeronautical Chart - ICAO 1:500,000

The Irish Aviation Authority has produced a visual flight rules (VFR) aeronautical encapsulated A4 folded chart Scale 1:500,000. This chart is for VFR navigation within the boundaries of the Shannon FIR. In addition to aeronautical information, the charts provide terrain contours, hydrographic, topographic, cultural and other visual features compatible with legibility at the scale of the chart - this information is supplied by Ordnance Survey Ireland and/or Ordnance Survey Northern Ireland.

4.2.2 Aeronautical Chart 1:250,000

The Irish Aviation Authority has produced a visual flight rules (VFR) aeronautical encapsulated A4 folded chart Scale 1:250,000. It comprises two charts - front and back (East & West, North & South), covering the Shannon FIR. The charts are for VFR navigation within the boundaries of the Shannon FIR. In addition to aeronautical information, the charts provide terrain contours, hydrographic, topographic, cultural and other visual features compatible with legibility at the scale of the chart - this information is supplied by Ordnance Survey Ireland and/or Ordnance Survey Northern Ireland.

4.2.3 Instrument Approach Chart – ICAO

These charts are designed to provide the pilot with a graphic presentation of the Instrument Approach, Missed Approach and Holding Procedures and to facilitate the transition from non-visual to visual flight at any point on the final approach.

4.2.4 Visual Approach Chart – ICAO

These charts are designed to assist pilots making a visual approach and to provide pilots with designated holding patterns maintained by visual reference to the ground.

4.2.5 Aerodrome Chart – ICAO

These charts provide flight crew with detailed information on runways, taxiways, lighting and other aerodrome features to

facilitate the surface movement of aircraft.

4.2.6 Aerodrome Obstacle Chart - ICAO - TYPE “A” (Operating Limitations)
These charts are designed to provide the operator with the data necessary to enable compliance with the operating limitations as contained in ICAO Annex 6.

4.2.7 Aerodrome Obstacle Chart - ICAO - TYPE *“B”*
These charts are designed to provide the data necessary or determination of minimum safe altitudes/heights and procedures for use in the event of an emergency during take-off or landing.

4.2.8 Precision Approach Terrain Chart – ICAO
These charts provide detailed terrain profile information within a defined portion of the final approach so as to enable aircraft operating agencies to assess the effect of terrain on decision height determination by the use of radio altimeter.

4.2.9 ATC Surveillance Minimum Altitude Chart
This Supplementary Chart shall provide information that will enable flight crews to monitor and cross check altitudes assigned by a controller using an ATS surveillance system.

5. LIST OF CHART SERIES

Title of series and Scale	Series	Chart Ref	Chart name and/or Number	Date
Aeronautical Chart ICAO 1:500,000	ANC/ 500	Edition 12	Ireland Sheet 2172 ABCD	24 FEB 2022

ENR 1.4 ATS AIRSPACE CLASSIFICATION AND DESCRIPTION

1. ATS AIRSPACE CLASSIFICATION

Class	Type of Flight	Separation Provided	Service Provided	VMC visibility and distance from cloud minima	Speed limitation	Radio communication requirement	Subject to ATC Clearance
1	2	3	4	5	6	7	8
A	IFR only	All Aircraft	Air traffic control service	Not applicable	N/A	Continuous two-way	Yes
C	IFR	All Aircraft	Air traffic control service	Not applicable	N/A	Continuous two-way	Yes
	VFR	VFR from IFR	Air traffic control service for separation from IFR. VFR Traffic information and traffic avoidance advice on request	At and above FL100: 8km flight visibility, 1500m horizontal and 1000ft vertical from cloud. Below FL100: 5km flight visibility, 1500m horizontal and 1000ft vertical from cloud.	250kts IAS below FL100	Continuous two-way	Yes
G	IFR	Nil	Flight Information service	Not applicable	N/A	Continuous two-way[1] (for exception see footnote [1] below)	No
	VFR	Nil	Flight Information service	At and above FL100: 8km flight visibility, 1500m horizontal and 1000ft vertical from cloud. Below 3050m (10,000ft) AMSL and above 900m (3000ft) AMSL, or above 300m (1000ft) above terrain, whichever is the higher. Flight visibility of 5km and 1500m horizontally 300m (1000ft) vertically distance from cloud OR At and below 900m (3000ft) AMSL, or 300m (1000ft) above terrain whichever is the higher: flight visibility of 5km (3km for flight at IAS 140kts or less) and Clear of cloud and with the surface in sight. Helicopters may be flown below 300m (1000ft) above terrain in flight visibility not less than 1000m if manoeuvred at a speed which would give the pilot in command adequate opportunity to observe other traffic or obstacles in good time to avoid collision.	250kts IAS below FL100	No[1] (for exception see footnote [1] below)	No

1. Radio Mandatory Zones (RMZ) - Pilots shall maintain a continuous air-ground voice communication watch and establish two-way communication, as necessary, on the appropriate communication channel in RMZ.

2. ATS AIRSPACE DESCRIPTION

a. Class A. IFR flights only are permitted;.All flights are provided with air traffic control service and are separated from each other. Continuous air-ground voice communications are required for all flights. All flights shall be subject to ATC clearance.

b. Class C. IFR and VFR flights are permitted. All flights are provided with air traffic control service and IFR flights are separated from other IFR flights and from VFR flights. VFR flights are separated from IFR flights and receive traffic information in respect of other VFR flights and traffic avoidance advise on request. Continuous air-ground voice communications are required for all flights. For VFR flights a speed limitation of 250kts indicated airspeed (IAS) applies below 3050m (10,000ft) AMSL, except where approved by the competent authority for aircraft types, which for technical or safety reasons, cannot maintain this speed. All flights shall be subject to ATC clearance.

c. Class G. IFR and VFR flights are permitted and receive flight information if requested. All IFR flights shall be capable of establishing air-ground voice communications. A speed of 250kts IAS applies to all flights below 3050m (10,000ft) AMSL, except where approved by the competent authority for aircraft types, which for technical or safety reasons cannot maintain this speed. ATC clearance is not required.

d. The designation of the airspace classification shall be appropriate to the needs of the Member States, except that all airspace above FL195 shall be classified as Class C airspace.

EICK AD 2.1 AERODROME LOCATION INDICATOR AND NAME

EICK – CORK/International

EICK AD 2.2 AERODROME GEOGRAPHICAL AND ADMINISTRATIVE DATA

1	**ARP and its site**	515029N 0082928W Mid Point RWY 16/34
2	**Direction and distance from (city)**	6.5KM (3.5 NM) south of Cork city
3	**AD Elevation, Reference Temperature & Mean Low Temperature**	502 ft AMSL/18.5°C (Max Temp) 1.6°C (MNM Temp)
4	**Geoid undulation at AD ELEV PSN**	187ft
5	**MAG VAR/Annual change**	3° W (2021)/11' decreasing
6	**AD Operator, address, telephone, telefax, email, AFS, Website**	Post: daa plc, Cork Airport, Co. Cork. T12 P5NF Phone:+ 353 21 431 31 31 URL: www.corkairport.com Email: cork.feedback@corkairport.com Telex: 75085 AFS: EICKYDYX
7	**Types of traffic permitted (IFR/VFR)**	IFR/VFR
8	**Remarks**	Forward all Commercial correspondence to the Director, Cork Airport.

EICK AD 2.3 OPERATIONAL HOURS

1	**AD Operator**	H24
2	**Customs and immigration**	H24
3	**Health and sanitation**	H24
4	**AIS Briefing Office**	H24 In conjunction with AIS Shannon
5	**ATS Reporting Office (ARO)**	H24 In conjunction with AIS Shannon
6	**MET Briefing Office**	H24
7	**ATS**	H24
8	**Fuelling**	H24
9	**Handling**	H24
10	**Security**	H24
11	**De-icing**	H24

12	**Remarks**	Airport closed on Christmas Day. Exact HR advised by NOTAM

EICK AD 2.4 HANDLING SERVICES AND FACILITIES

1	**Cargo handling facilities:**	Facilities AVBL from Swissport
2	**Fuel/oil types**	Fuel: Jet A1, AVGAS 100LL / Oil Grades: W80, W100
3	**Fuelling facilities/capacity**	Full facilities are available daily 0530-2200HR local time all year. Outside these HR varying surcharges may apply depending on the type of aircraft, quantity of fuel required, time that the refuelling facility is required and on whether prior notice is received from the operator during the above stated hours. Details are available from Aerodrome Administration.
4	**De-icing facilities**	Contact Aerodrome Administration
5	**Hangar space available for visiting aircraft**	Single hangar approx 1000 sq ft to accommodate up to Challenger 300 type aircraft (or approx 17 tonne) managed by Weston Aviation.
6	**Repair facilities for visiting aircraft**	Nil
7	**Remarks**	Passenger Handling is AVBL from Aer Lingus and Swissport. General Aviation handling is AVBL from Swissport Executive Aviation and Weston Aviation.

EICK AD 2.5 PASSENGER FACILITIES

1	**Hotel(s) at or in the vicinity of AD**	At airport and in Cork city.
2	**Restaurant(s) at or in the vicinity of AD**	At airport both landside & airside.
3	**Transportation**	Buses, Taxis, self-drive cars.
4	**Medical facilities**	First Aid treatment. Hospitals in Cork 6.5KM.
5	**Bank and Post Office at or in the vicinity of AD**	ATM facilities available. No Post office or Bank at Airport.
6	**Tourist Office**	Cork city
7	**Remarks**	Short term multi-storey car park. Long term surface car park. Executive Lounge: see www.corkairport.com

EICK AD 2.6 RESCUE AND FIRE FIGHTING SERVICES

1	**AD category for fire fighting**	CAT 7 CAT 9 AVBL with 48HR prior notice
2	**Rescue equipment**	Hydraulic cutting equipment, Emergency Lighting and other equipment in compliance with Category 7 requirements

3	**Capability for removal of disabled aircraft**	Coordinators: Head of Airside Infrastructure Resident Engineer Phone: + 353 (0)21 4329 659/ + 353 (0)87 602 9011 Capability: Up to Code C aircraft (Utilising equipment available at Dublin Airport) - Details available from Coordinators.
4	**Remarks**	Communication with Rescue and Fire Fighting Service: Frequency 121.600MHz AVBL for direct communication between ACFT and Rescue and Fire Fighting Service. 121.600MHz should be requested initially via ATC. Call sign for the Rescue and Fire Fighting Service is 'Fire 1'. It is mandatory for both ACFT and Rescue and Fire Fighting Service to maintain contact with ATC at all times. ATC do not have access to 121.600MHz. Frequency 121.600MHz is H24 and is AVBL within 8NM radius of Cork Airport.

EICK AD 2.7 RUNWAY SURFACE CONDITION ASSESSMENT AND REPORTING AND SNOW PLAN

1	**Type(s) of clearing equipment**	Snow clearing and anti-icing equipment including: Sweeper-blowers Tractors equipped with ploughs or brushes Sprayers of de-icing fluid Snow blower Snow ploughs Granular spreaders Suction Sweeper Tipper Truck
2	**Clearance priorities**	1. Duty runway and associated taxiways, aircraft stands, together with apron areas. 2. Other areas.
3	**Use of material for movement area surface treatment**	De/anti-icing of aircraft movement areas carried out as required using potassium acetate fluids (KAC) and/or UREA.
4	**Specially prepared winter runways**	Not applicable.
5	**Remarks**	Annual snow plan available from the Aerodrome Operator on request. See also AD 1.2

EICK AD 2.8 APRONS, TAXIWAYS AND CHECK LOCATION DATA

1	**Apron surface and strength**	Surface: CONC / Strength: PCN 50/R/B/W/U			
2	**Taxiway width, surface and strength**	TAXIWAY	WIDTH	SURFACE	STRENGTH
		A	27M	CONC/ ASPH	PCN 63/R/B/ W/T
		B	23M	CONC	PCN 50/R/B/ W/U
		C	30M	CONC/ ASPH	PCN 50/R/B/ W/U
		E	13M	ASPH	Light Aircraft MTOW 5,700kg
		F	10.5M	ASPH	PCN 12/F/B/ W/U
3	**ACL location and elevation**	Location: Terminal Apron / Elevation: 490ft AMSL			
4	**VOR checkpoint**	Nil			
5	**INS checkpoint**	EICK AD 2.24-2			
6	**Remarks**	Nil			

EICK AD 2.9 SURFACE MOVEMENT GUIDANCE AND CONTROL SYSTEM AND MARKINGS

1	**Use of aircraft stand ID signs, TWY guide lines and visual docking/parking guidance system of aircraft stands**	Taxiing guidance signs at all intersections and at holding points. Mandatory signs lighted. Guidelines on aprons and taxiways. Taxiway information markings. Marshalling on aircraft stands.
2	**RWY/TWY markings and LGT**	RWY 16/34 Designation THR, TDZ, centreline, side stripe, aiming point. Holding positions at RWY/RWY intersection. RWY 07/25 Designation, THR, TDZ, centreline, side stripe, aiming point. Holding positions at RWY/RWY intersection. Taxiways Centreline - All taxiways Holding Point - TWY A, B, C, E, F
3	**Stop bars**	Controllable stop-bar on TWY A Fixed stop-bars on TWY B, C, and E and F.Runway guard lights on TWY A, B, C, E, F and on RWY16/34 and RWY 07/ 25 at RWY/RWY intersection.
4	**Other RWY Protection measures**	-
5	**Remarks**	See also EICK AD 2.14 and 2.15 for lighting

EICK AD 2.20 LOCAL TRAFFIC REGULATIONS

1. Taxiing Restrictions

- The apron taxiway south of TWY C is only suitable for aircraft of wingspan less than 36M.
- TWY E is only suitable for use during daylight hours and for aircraft of wingspan less than 24M and MTOW less than 5700kg.
- TWY F is only suitable for aircraft of wingspan less than 24M.
- 180° turns by wide-bodied aircraft on RWY 16/34 are permitted only at runway ends.
- Runway 16/34 - 180° turns by aircraft with a wingspan less than 52m are permitted on Runway 16/34 on condition that the aircraft is turned at a low constant speed (5-8 kts) with minimal thrust, to avoid the inboard main landing gear wheel becoming stationary (Spot turns must be avoided).

2. Taxiway A
Taxiway A slopes downwards from the apron to RWY 16/34 at a gradient of 2% (1 in 50).

3. Aircraft Training
Local General Aviation night training operations at aerodrome subject to prior permission from Aerodrome Administration.

4. Mandatory Ground Handling
All aircraft must avail of ground handling. All aircraft of less than 2 tonnes maximum certified AUW must avail of minimum handling, i.e. crew and passenger marshalling between departures/arrivals and the aircraft.

EICK AD 2.21 NOISE ABATEMENT PROCEDURES

1. Aircraft operators shall ensure at all times that aircraft are operated in a manner calculated to cause the least disturbance practicable in areas surrounding the airport. The following procedures are provided to ensure that the necessary safety of flight operations is maintained while minimising exposure to noise on the ground.

2. CAT A, B Aircraft.
All CAT A, B aircraft departures from all runways must maintain straight ahead after take-off until passing 1000ft QNH before commencing turn. No take-off turn shall be commenced before the departure end of runway.

3. CAT C, D Aircraft.
CAT C, D aircraft departures must maintain straight ahead after take-off until passing 2500ft QNH before commencing turn.

Take-off climb should comply with the recommendations for Aeroplane Operating Procedures-Take-Off, Procedure NADP1 or NADP2 detailed in Part I, Section 7, Chapter 3 of Pans-Ops ICAO Doc 8168, Volume 1.

EICK AD 2.22 FLIGHT PROCEDURES

1. General

1.1 Holding Areas
Protected airspace is provided for Holding Areas in accordance with the criteria contained in PANS-OPS ICAO Doc 8168, Volume II for basic holding areas.

1.2 SID and STAR

1.2.1 RNAV Equipped Aircraft

SIDs and STARs for RWY16 and RWY34 have been developed in accordance with ICAO Doc 8168 (PANS OPS) and comply with Eurocontrol guidelines for the design of Terminal Procedures for Area Navigation.

The supporting navigation infrastructure is GNSS and INS/IRS as permitted by the Aircraft Flight Manual (AFM) and/ or approved by the appropriate regulatory authority.

Use of DME/DME is acceptable at higher levels, where navigation accuracy of +/- 1NM can be maintained, however due to the lack of DME facilities DME/DME can not be relied upon to provide a navigation solution at lower levels. Operators which have obtained operational and airworthiness approval, from their regulatory authority, may operate the RNAV SID and STAR procedures in accordance with the conditions of approval including:

- P-RNAV certified aircraft;
- B-RNAV certified aircraft only above MSA;

Climb to MSA on the initial segments of the RNAV SIDs may be conducted using conventional navigation.

If the RNAV equipment fails, or navigation accuracy of +/-1 NM can not be maintained, inform ATC as soon as possible. Radar vectoring will be provided.

1.2.2 RTF Phraseology

Phraseology used will be as provided in the European Regional Supplementary Procedures (ICAO Doc 7030) and outlined in Eurocontrol Guidance material for RNAV SIDs and STARs.

Examples of phraseology for ATC are:

{CALLSIGN} CLEARED {STAR designator} ARRIVAL, RUNWAY {designator}

Note: On such a clearance flight crew shall continue on route until reaching start point of the STAR.

{CALLSIGN} ADVISE IF ABLE {designator} DEPARTURE [or ARRIVAL].

If ATC are unable to issue a requested SID or STAR:

{CALLSIGN} UNABLE TO ISSUE (designator) DEPARTURE [or ARRIVAL] DUE [Reason]

Examples of pilot phraseology in the event of being unable to accept SID or STAR:

UNABLE (designator) DEPARTURE [or ARRIVAL] DUE TO RNAV TYPE

UNABLE RNAV DUE EQUIPMENT

1.2.3 Non RNAV Equipped aircraft

Non RNAV equipped aircraft will be assigned a clearance based on conventional navigation aids and/or vectoring.

1.3 Visual manoeuvring (circling) approaches

Visual manoeuvring (circling) approaches are permissible, on request, to all runways.

2. Speed Control - General Provisions

Speed Restrictions

General	Routeing to Holds	Intermediate Approach Segment (BTN IF and FAP)	Final Approach	Remarks
Below FL 100, Max IAS 250KT	ATLAM Max IAS 210KT BARNU, Max IAS 220KT	RWY 34 Max IAS 210KT RWY 16 Max IAS 220KT	Nil	1. *ATC may request specific speeds for accurate spacing. Comply with speed adjustments as promptly as feasible within operational constraints.* 2. *If unable to comply with the above, advise ATC as soon as possible.*

3. Arrival Procedures

3.1 Clearance to enter the CTA and CTR

Aircraft flying the ATS Route system will be cleared into the CTA/CTR associated with Cork without having to request a specific entry clearance.

Arriving Aircraft for RWY 16/34 capable of flying STARs will normally be cleared on a STAR appropriate to the route by ATC. On occasions ATC may radar vector aircraft for arrival (Due traffic or technical reasons).

Arriving aircraft for RWY 07/25 will be vectored to join the approach.

3.2 Initial Approach Procedures

- With Radar Control
  In order to expedite the flow of traffic, aircraft may be cleared on STARs, or may receive radar vectors on to final approach track from the hold or earlier on the Standard Arrival Route.
  Pilots should plan their flight profile in such a manner as to be able to achieve the Minimum Holding Level at the appropriate hold
  Actual descent clearance will be as directed by ATC.

- Without Radar Control
  When RADAR is not serviceable, aircraft will be cleared to join the instrument approach procedure appropriate to the landing direction from the appropriate hold.

- Communications failure procedures for arriving aircraft
  Aircraft experiencing communications failure in the Shannon CTR/CTA shall set transponder code A7600 and comply with standard ICAO procedures.
  Supplemented by the following:

  - Traffic cleared on STAR
    Aircraft cleared on a STAR and experiencing a Communications failure shall follow the route of the STAR at the last cleared level or altitude. On reaching the appropriate hold fix, descend to 3000ft and complete the instrument approach procedure appropriate to the Runway in use.

  - Traffic Radar vectored to final approach

    1. *Aircraft being radar vectored to final approach should join, in the most expeditious manner, and complete the Instrument Approach procedure appropriate to the Runway in use.*

    2. *If unable to comply with the above, or uncertain of position, climb to 3000ft QNH, proceed in the most expeditious manner to the hold appropriate to the Runway in use and complete the Instrument Approach Procedure appropriate to the Runway in Use.*

3.3 Surveillance Minimum Altitude Chart (EICK AD 2.24-29)

ALTITUDE TEMPERATURE CORRECTION to -5°C taken into account in determining minimums. For temperatures below -5°C altitude correction will be managed by ATC.

4. Departure Procedures

4.1 RWY 16 AND 34

Aircraft capable of complying with Standard Instrument Departures will proceed in accordance with the SID.

If an aircraft is unable to comply with Standard Instrument Departure the phraseology “Unable to comply with {departure} due {reasons}”

Pilots who cannot comply with Standard Instrument Departures shall advise ATC in good time using the phraseology “Unable to comply with {departure} due {reasons}, so that alternative clearances can be issued.

4.2 Communications failure procedures for departing aircraft

Departing aircraft experiencing communications failure shall set transponder code A7600 and comply with the following procedures:

RFL below FL080: Departing traffic cleared by ATC to a level/altitude below the RFL, shall comply with Communication failure procedures as outlined in ICAO Annex 2.

RFL FL080 or above: Departing traffic cleared by ATC to a level or altitude below FL080 shall maintain the cleared level for a period of three minutes following the time the altitude/level is reached and thereafter adjust level and speed in accordance with filed flight plan.

Departing Traffic experiencing a communications failure above FL080 shall comply with communications failure procedures as outlined in ICAO Annex 2.

Note: CAT A, B aircraft may be assigned a Departure appropriate to CAT C, D aircraft at the discretion of ATC.

5. Low Visibility Procedures

5.1 Low Visibility Procedures apply at Cork Airport when the cloud ceiling is below 200ft (60M) and either the IRVR is less than 550M or the meteorological visibility is less than 800M.

5.2 Only RWY 16 may be used for CAT II (arrival) operations. The CAT II holding position on TWY A must be used. When these Procedures are in operation and RWY 16 is in use the following standard taxi route system applies:

- Departing aircraft shall normally use TWY A.
- Arriving aircraft shall normally use TWY C.

5.3 Low Visibility Take-off (LVTO) Procedures

During LVP Operations, LVTOs are permitted from both Runway 16 and Runway 34. It is at the discretion of the PIC to depart based on their airline operation procedures in LVP conditions.

Take-offs are not available in IRVR conditions below 125M

ATC shall inform departing pilots if and when any IRVR value falls below 125M

5.4 TWY Stopbar/Centreline Lighting

TWY stopbar/centreline lighting will be in use.

At no time shall an aircraft or vehicle cross an illuminated stop bar and any instruction to do so should be challenged. In Exceptional circumstances when the stop bar cannot be extinguished the authorisation to cross the illuminated stop bar may be given by ATS. This shall always be challenged and confirmation received that this instruction is part of a contingency arrangement due to a failure of the stop bar. All aircraft and vehicle operators shall request for the instruction to cross an illuminated stop bar to be reconfirmed by ATS and read back before proceeding.

Pilots will be informed by RTF when Low Visibility Procedures are in operation.

Caution: Operational evaluation has indicated that the performance of automatic landing systems may be affected by the profile of the terrain under the approach to RWY 16. Operators' procedures should take account of this during CAT II approaches.

Aircraft operator requirements for CAT II operations at Cork may be obtained from Aerodrome Administration.

6. Visual Approach Chart (VAC)

Chart EICK AD 2.24-28 (VAC) provides data for VFR pilots.

Visual Reporting Point (VRP) Holds:

- Carrigaline Town Hold: 514858.94N 0082326.97W (WGS84). Left-hand pattern, based on Carrigaline Town. Outbound leg is 1 minute, flown at 120KT TAS, Inbound track 246°M. Minimum holding altitude is 1500ft QNH.
- Classis Lake Quarry Hold: 515256.46N 0083748.90W. Right-hand pattern, based on quarry lake near Oven village. Outbound leg is 1 minute, flown at 120KT TAS. Inbound track 163°M. Minimum holding altitude is 1500ft QNH.
- Dunkettle Roundabout Hold: 515414.76N 0082316.64W. Left-hand pattern, based on Dunkettle Roundabout. Outbound leg is 1 minute, flown at 120KT TAS. Inbound track 163°M Minimum holding altitude is 1500ft QNH.
- Halfway Roundabout Hold: 514806.24N 0083425.70W. Right-hand pattern, based on Halfway village. Outbound leg is 1 minute, flown at 120KT TAS, inbound track 066°M. Minimum holding altitude is 1500ft QNH.

Note: VFR Pilots may be requested to report at the above reference VRP's if flight planned to land at EICK and will be issued with joining instructions as required.

EICK AD 2.23 ADDITIONAL INFORMATION

Refer to ENR 5.6 for bird hazard information

Runway 07/25

The runway strip width and obstacle limitation surfaces for Runway 07/25 are appropriate to a Code 3 Non-instrument runway.

ICAO Categories A, B aircraft can perform certain Type-A Approaches only, to runway 07/25-see EICK AD 2.24

A Type A Approach being that having a minimum descent height or decision height at or above 75M (250ft)

EIDW AD 2.9 SURFACE MOVEMENT GUIDANCE AND CONTROL SYSTEM AND MARKINGS

1	**Use of aircraft stand ID signs, TWY guide lines and visual docking/parking guidance system of aircraft stands**	Taxiing guidance signs at all intersections and at holding points. Mandatory signs lighted. Guidelines on aprons and taxiways. Taxiway information markings. AVDGS is installed on majority of stands. Where AVDGS is available and operational, it is mandatory for it to be used. On stands where AVDGS is not available or not operational Marshallers must be provided. No aircraft should enter a stand without guidance. If AVDGS is not operational on the stands listed below, the aircraft listed cannot taxi onto stand due to reduced clearances. Aircraft will be allocated an alternative stand or must shut down engines and tow on. Stand Restrictions: Stand 313C - B777-300. Stand 314 - B787-900, A330-200 and A330-300. Stand 316 - All A/C types. Stand 409C - All A/C types.
2	**RWY/TWY markings and LGT**	RWY 10R/28L Designation, THR, TDZ, centreline, side stripe, aiming point. RWY 10L/28R Designation, THR, TDZ, centreline, side stripe, aiming point. RWY 16/34 Designation, THR, TDZ, centreline, side stripe, aiming point. For the purposes of Taxiing Intermediate holding positions. Taxiways Centreline, edge stripes, holding positions, intersection markings except TWY S1. Intermediate holding position lights on TWY H1, M1, W2, E2 Link 1, Link 2, Link 3, Apron Taxiway 6 and RWY 16/34 at 16-1 and 34-2, 16-2, K, N, M, F-Outer.

3	**Stop bars**	Switchable Stop bars at CAT II/III Runway Holding Position on TWY E1, S7, N2. Switchable Stop Bars at CAT I Runway Holding Position for Runway 10R/28L on TWY E1, RWY 34, TWY S1, TWY S2, TWY S3, TWY S4, TWY S5, TWY S6, TWY S7 & Maintenance Base. Switchable Stop bars at CAT I Runway Holding Position for Runway 16/34 on TWY E1, E2,TWY B2, TWY A, TWY H1, TWY M1, TWY P1, TWY N, TWY N4 (on RWY 28R), TWY M, TWY W4, TWY W3, TWY W2, TWY W1, TWY S1, RWY 10R & Fire Station Road to RWY16. Switchable Stop bars at CAT I Runway Holding Position for Runway 10L/28R on TWY N2. Switchable Stop bars at co-located CAT I/II/III Runway Holding Position for Runway 10L/28R on TWY N1, TWY N6 & TWY N7. Fixed Stop bars for CAT I conditions to Runway 16/34 is RWY 10L. Fixed Stop bars for CAT II/III conditions for Runway 10R/28L on RWY 34 (CAT III), RWY 34 (CAT I), TWY S1, TWY S2, TWY S3, TWY S4, TWY S5, TWY S6, Maintenance Base, TWY B2, TWY A & H1. Fixed Stop bars for CAT II/III conditions for Runway 10L/28R on TWY N3, TWY N4, RWY 16, TWY N5. No Entry bars for Runway 10L/28R on TWY N3, TWY N4, RWY 16 & TWY N5. Runway Guard Lights on Runway 10R/28L on TWY E1 CAT I, TWY E1 CAT III, RWY 34, TWY S1, TWY S2, TWY S3, TWY S4, TWY S5, TWY S6, TWY S7 CAT I, TWY S7 CAT III & Maintenance Base. Runway Guard Lights for Runway 16/34 on TWY E1, TWY B2, TWY A, TWY H1, TWY M1, TWY P1, TWY N, TWY M, TWY W4, TWY W3, TWY W2, TWY W1, TWY S, TWY S1, RWY 10R & Fire Station Road to RWY 16. Runway Guard Lights for 10L/28R on TWY N1, TWY N2 CAT I, TWY N2 CAT III, TWY N3, TWY N4, RWY 16, TWY N6, TWY N7.

EIDW AD 2.20 LOCAL TRAFFIC REGULATIONS

1. Ground Movement

1.1 General

i. Stop-bars are provided at all runway entry/exit points and are illuminated to protect active runways. When a runway is inactive the associated stop-bar is normally not illuminated. However, specific clearance from ATC must still be obtained before entering or crossing an inactive runway.

ii. Pilots should use the minimum power necessary while taxiing. In apron areas, pilots should operate at the minimum power commensurate with the intended manoeuvre, due to the effect of jet blast on personnel, equipment and buildings.

iii. Flight crew are responsible for wing tip clearance and are reminded of the importance of maintaining a careful lookout at all times, regardless of location and visibility conditions.

iv. ATC may require aircraft to manoeuvre in close proximity to other aircraft. Avoidance of other aircraft is the responsibility of the flight crew involved. If doubt exists as to whether an aircraft can be passed safely, the flight crew should stop, advise ATC, and request alternative instructions if available.

v. In order to assist in the maintenance of safe separation of aircraft, when flight crew are instructed to stop at any runway-holding or intermediate holding position they should position the aircraft as close as possible to the relevant pavement marking while ensuring that the marking remains visible from the cockpit.

1.2 Turning

No turns should be made at the following runway/taxiway intersections:

- No turns should be made by aircraft from RWY 28R to TWY N3 or vice versa.
- No turns should be made by aircraft from RWY 28R to TWY N4 or vice versa.
- No turns should be made by aircraft from RWY 28R to RWY 16 or vice versa.
- No turns should be made by aircraft from RWY 10L to TWY N5 or vice versa.
- No turns should be made by aircraft from RWY 10L to RWY 16 or vice versa.
- No left turns should be made by aircraft from TWY M to RWY 34 or vice versa.

No turns should be made at taxiway/taxiway intersections where taxi centreline markings are not provided.
Particular attention is drawn to the following:

- No turns should be made by aircraft from TWY W1 to TWY S East of TWY W1 or vice versa.
- No turns should be made by aircraft from TWY F1 to TWY B2 or vice versa.
- No turns should be made by aircraft from TWY B2 to TWY E1 or vice versa.
- No turns should be made by aircraft from TWY A to TWY F1 or vice versa.
- No turns should be made by aircraft from TWY W1 to TWY W2 or vice versa at intersection with TWY S.
- No turns should be made by aircraft from TWY M to TWY N5.
- No turns should be made by aircraft from TWY N to TWY N3.

1.3 Taxiing Restrictions

Location	Situation	Restriction
TWY A	Outbound aircraft holding on TWY A	Aircraft movement not permitted between TWY F1 and Link 2 / TWY F2 or vice versa
TWY B1	Aircraft with wingspan 36m or greater operating on TWY B1	Aircraft not permitted on TWY Z
TWY B2	Outbound aircraft (wingspan less than 36m) holding on TWY B2	Aircraft movement not permitted between TWY F1 and TWY E1 / TWY B1 or vice versa
TWY B2	Outbound aircraft (wingspan 36m or greater) holding on TWY B2	Aircraft movement not permitted between TWY F1 and TWY E1 / TWY B1 or vice versa and Aircraft are not permitted to taxi between TWY E1 and TWY B1 / TWY Z or vice versa
TWY B2	Inbound aircraft (wingspan less than 36m) holding on TWY B2	Movement between TWY A and RWY16-34 / TWY S / TWY S1 or vice versa restricted to aircraft with wingspan less than 36m
TWY B2	Inbound aircraft with wingspan 36m or greater holding on TWY B2	Aircraft movement not permitted between TWY A and RWY16-34 / TWY S / TWY S1 or vice versa
APRON TAXIWAY C	Aircraft operating on Apron Taxiway C	Aircraft not permitted on Apron Taxiway DN or Apron Taxiway DS
APRON TAXIWAY DN	All operations	Restricted to aircraft with wingspan less than 36m
APRON TAXIWAY DN	Aircraft operating on Apron Taxiway DN	Aircraft not permitted on Apron Taxiway C
APRON TAXIWAY DS	All operations	Restricted to aircraft with wingspan less than 36m
APRON TAXIWAY DS	Aircraft operating on Apron Taxiway DS	Aircraft not permitted on Apron Taxiway C
TWY E1	Outbound aircraft (wingspan less than 36m) holding on TWY E1	Movement between TWY B1 and TWY B2 / TWY F1 or vice versa restricted to aircraft with wingspan less than 36m
TWY E1	Outbound aircraft (wingspan 36m or greater) holding on TWY E1	Aircraft movement not permitted between TWY B1 and TWY B2 / TWY F1 or vice versa
TWY F1	Aircraft travelling towards LINK1 / TWY B1 / TWY E1 holding on TWY F1	Aircraft movement not permitted between TWY A and LINK 2 / TWY F2 or vice versa
TWY F1	Aircraft travelling towards LINK 2 / TWY F2 holding on TWY F1	Aircraft movement not permitted between TWYs B1 and B2 or vice versa or between TWY E1 and TWY B1 / TWY Z or vice versa
APRON TAXIWAY F-INNER	All operations	Restricted to aircraft with wingspan less than 36m
TWY K	All operations	Restricted to Code E aircraft (less than 65m wingspan) Note A340 operations are prohibited on TWY K
TWY K	All operations	Aircraft movement not permitted on to TWY N behind holding aircraft on N1
TWY K	All operations	Aircraft movement not permitted on to TWY N if aircraft holding on N2
TWY N	All operations	Aircraft movement not permitted to pass behind aircraft holding on TWY N awaiting intersection take-off on RWY 16
TWY N	All operations	Aircraft movement not permitted to pass behind aircraft holding on TWY N1 onto TWY K
TWY N1	All operations	Aircraft movement not permitted on to TWY N2 behind holding outbound aircraft
TWY N1	All operations	Aircraft movement not permitted on to TWY N behind holding aircraft on TWY K
TWY N2	All operations	Aircraft movement not permitted on to TWY N1 behind holding aircraft

Location	Situation	Restriction
TWY N2	All operations	Aircraft movement not permitted on to TWY N2 if aircraft holding on TWY N1
TWY N3	All operations	No Entry allowed for aircraft from TWY N
TWY N3	All operations	No Entry allowed for aircraft towing or taxiing on R28R from a westerly direction
TWY N4	All operations	Restricted to code E aircraft (less than 65m wingspan)
TWY N4	All operations	No Entry allowed for aircraft on to TWY N4 when 28R is the active runway
TWY N4	All operations	No Entry allowed for aircraft towing or taxiing on RWY 28R in a westerly direction from
TWY N5	All operations	No Entry allowed for aircraft from TWY M
TWY N5	All operations	No Entry allowed for aircraft towing or taxiing on RWY10L in an easterly direction
TWY N6	All operations	Aircraft movement not permitted from TWY M on to TWY N7 behind holding aircraft
TWY N7	All operations	Aircraft movement not permitted from TWY M on to TWY N6 behind holding aircraft
TWY S3	All operations	Restricted to daylight hours only and aircraft with wingspan 30m or less
TWY S5	Outbound aircraft (wingspan less than 36m) holding on TWY S5	Movement on TWY S behind holding aircraft restricted to aircraft with wingspan less than 36m
TWY S5	Outbound aircraft (wingspan 36m or greater) holding on TWY S5	Aircraft movement not permitted on TWY S behind holding aircraft
TWY S6	Outbound aircraft (wingspan less than 36m) holding on TWY S6	Movement on TWY S behind holding aircraft restricted to aircraft with wingspan less than 36m
TWY S6	Outbound aircraft (wingspan 36m or greater) holding on TWY S6	Aircraft movement not permitted on TWY S behind holding aircraft
TWY Z	Aircraft operating on TWY Z	TWY B1 restricted to aircraft with wingspan less than 36m
RWY 16-34 CAT I Runway Holding position for RWY 10R-28L	Outbound aircraft (wingspan less than 36m) holding on RWY 16-34 for entry to RWY 10R-28L	Movement through the intersection of RWY 34 and TWYs A, B2, S, S1 restricted to aircraft with wingspan less than 36m
RWY 16-34 CAT I Runway Holding position for RWY 10R-28L	Outbound aircraft (wingspan 36m or greater) holding on RWY 16-34 for entry to RWY 10R-28L	Aircraft movement not permitted through the intersection of RWY 34 and TWYs A, B2, S, S1.

1.4 Apron Operations

Apron Taxiway1 and Apron Taxiway 2, the aircraft stand taxilanes serving Stands 121L-127, 130-131S, and 200L-203L are restricted to aircraft with a maximum wingspan of 36m.

Apron Taxiway 3, the aircraft stand taxilane serving Stands 205R-207T and 311L-313L, is restricted to aircraft with a maximum wingspan of 41.10m.

The aircraft stand taxilane serving Stands 412-418 is restricted to aircraft with a maximum wingspan of 36m.

1.5 Use of Runways (General)

1.5.1 The parallel runways (10R-28L and 10L-28R) shall be used in preference to the crosswind runway, 16-34,

1.5.2 When winds are westerly, Runway 28L shall be preferred for arriving aircraft. Either Runway 28L or 28R shall be used for departing aircraft as determined by air traffic control,

1.5.3 When winds are easterly, either Runway 10L or 10R as determined by air traffic control shall be preferred for arriving aircraft. Runway 10R shall be preferred for departing aircraft, and

1.5.4 Runway 10L-28R shall not be used for take-off or landing between 2300 hours and 0700 hours, except in cases of safety, maintenance considerations, exceptional air traffic conditions, adverse weather, technical faults in air traffic control systems or declared emergencies at other airports.

1.6 Runway 16-34 Operations

Unless otherwise instructed by ATC, aircraft vacating the runway must not stop on any of the following adjoining taxiways: E1, E2, B2, A, H1, M1, P1 or N. Aircraft vacating the runway and stopping in any of these taxiways are not clear of the runway.
Aircraft exiting the runway via TWY N4 must continue on to the section of taxiway parallel to the runway to clear the runway. Aircraft on the adjacent parallel taxiways must give way to aircraft vacating the runway.

1.7 Runway 28L Operations

Unless otherwise instructed by ATC, aircraft vacating the runway must not stop on any of the following taxiways: S3, S4, S5, S6. Aircraft vacating the runway and stopping on any of these taxiways are not clear of the runway. Aircraft exiting onto TWY S7 must continue on to the section of TWY S parallel to the runway to clear the runway. Aircraft on the adjacent parallel taxiways must give way to aircraft vacating the runway.

1.8 Runway 10R Operations

Unless otherwise instructed by ATC, aircraft vacating the runway must not stop on any of the following taxiways: S2, S3 and S4. ATC may instruct arrivals to stop on taxiways E1 or S1 on a tactical basis. Aircraft vacating the runway and stopping on any of these taxiways are not clear of the runway. Aircraft on the adjacent parallel taxiways must give way to aircraft vacating the runway.

1.9 Runway 28R Operations

Unless otherwise instructed by ATC, aircraft vacating the runway must not stop on any of the following taxiways: N5, N6 and N7. Aircraft vacating the runway and stopping on any of these taxiways are not clear of the runway. Aircraft exiting these taxiways must continue on to the section of TWY M parallel to the runway to clear the runway. Aircraft on the adjacent parallel taxiways must give way to aircraft vacating the runway.

1.10 Runway 10L Operations

Unless otherwise instructed by ATC, aircraft vacating the runway must not stop on any of the following taxiways: N4, N3, N2 and N1. Aircraft vacating the runway and stopping on any of these taxiways are not clear of the runway. Aircraft exiting these taxiways must continue on to the section of TWY N parallel to the runway to clear the runway. Aircraft on the adjacent parallel taxiways must give way to aircraft vacating the runway.

2. Availability of Intersection Take-Off

Take-offs using less than the full length of the runway are available (except during Low Visibility Operations) from TWY/RWY intersections as listed in EIDW AD 2.13

During Low Visibility Operations, intersection take-offs using less than the full length are NOT permitted from RWY10R/28L.

The datum from which the reduced declared distances on RWY10R/28L, RWY 10L/28R and RWY16 are measured is the downwind edge of the specific taxiway projected perpendicular to the runway centreline as per section III-3 of the European Air Navigation Plan

The datum from which the reduced declared distances on RWY34 are measured is the intersection of the extended downwind edge of Taxiway S with the runway edge projected perpendicular to the runway centreline.

The take-off run available (TORA) is displayed on an illuminated sign adjacent to the taxiway.

2.1 RWY10R/28L and RWY 16/34

Intersection take-offs are subject at all times to pilots' discretion and aircraft operational requirements. Pilots should advise as early as possible of their ability to accept intersection take-offs.

Approval for intersection take-offs is subject to the air traffic situation.

2.2 RWY 10L/28R

Intersection take-offs from N2 and N6 are considered the primary line up points for RWY28R and RWY10L respectively in normal operations and also in Low Visibility Operations. Taxiways N1 and N7 are NOT available for departure in LVOs. Pilots should advise as early as possible if unable to accept departure from these points. Further information refer to 3.3 HIRO Departures.

Intersection take-offs are not available during Low Visibility Operations.

3 High Intensity Runway Operations (HIRO)

High Intensity Runway Operations (HIRO) are valid from 0600 to 2400HR (local time) unless otherwise advised by ATC (e.g. via ATIS). The HIRO system optimises separation of aircraft on final approach in order to minimise runway occupancy time for both arriving and departing aircraft, thereby maximising runway utilisation and minimising "go-around".

3.1 Arrivals

Pilots are reminded that by leaving the runway at the fastest speed commensurate with safety and standard operating procedures, ATC will be able to guide aircraft on final approach using minimum radar separation or separation minimum according to wake vortex category. Extended runway occupancy may result in a missed approach.

In order to reduce runway occupancy times, pilots shall apply the following procedure:

Pilots should pre-plan their landing and roll out to target the appropriate exit taxiway, weather permitting, that provides for a safe and expeditious exit from the runway to reduce delays and maximise utilisation at all times

Pilots are to ensure runway fully vacated before stopping i.e. aircraft are not to stop on any runway exit awaiting instructions from ATC but should continue on to the next available taxiway (unless instructed to do so by ATC)

Tactical requests to extend the landing roll to reduce ground taxi/exit nearer to parking stands are not to be made to ATC

Aircraft unable to vacate the runway via the preferred taxiways should notify ATC when the aircraft is between 8 and 4 NM from touchdown, or at the earliest opportunity after which it has been determined that it is unable to comply.

The preferred exit taxiways for RWY10R and RWY28L are:

RWY	Aircraft Type	Preferred exit TWY	Distance from threshold to exit point (m)
10R	Wingspan less than 36m and B757	TWY S2	1690
	All other aircraft	TWY S1	2240
28L	Wingspan less than 24m and all turboprops	TWY S4*	1240
	All other aircraft	RET S5	1597
10L	Up to Code E aircraft type	TWY N4	1469
	All other aircraft	RET N3	1700
28R	All aircraft	RET N5	1600
* TWY S4 and N4 are not available as a runway exit during Low Visibility Operations			

Pilots may plan their arrival using the threshold-to-exit-point distances set out in the table above. The distances are measured from the landing threshold to the point of the intersection of the runway centreline and the extended exit taxiway centreline pavement marking.

If the pilot of a landing aircraft cannot contact ATC due to RTF congestion, the pilot should fully vacate the runway and taxi into the next available taxiway. The pilot should then hold position until contact with ATC can be established.

3.2 Departures

ATC will consider every ACFT at the runway holding point as able to commence line-up and take-off roll immediately after clearance is issued, unless otherwise instructed. Pilots not ready when reaching the holding point (no ACFT in front on the same taxiway) shall advise ATC on Tower frequency as early as possible before entering the RWY. When cleared for take-off, ATC will expect and has planned on seeing movement within 10 seconds (of take-off clearance being issued). Wake vortex separation is applied by ATC in accordance with the published requirements. If more separation than the prescribed minima is requested, pilots shall notify ATC before entering the RWY.

Where possible, cockpit checks and cabin readiness should be completed before line-up and any checks needing completion on the runway should be kept to the minimum required. Pilots should not back-track when entering the runway unless specifically requested at the runway holding position.

Note: Pilots shall not cross the runway-holding position until the illuminated red stop bar has been extinguished. ATC do not issue conditional line-up clearances where stop bars are operational at line-up points.

3.3 Preferred Use of Intersection Take-Offs

Based on aircraft type and performance characteristics, ATC may issue instructions for aircraft to depart from runway intersections from which adequate take-off run is available. Intersection take-offs are subject at all times to pilots' discretion and aircraft operational requirements. Pilots unable to accept departure from an intersection point may request an alternate take-off position from ATC. Pilots requiring departure from the beginning of the runway should request it at the time of push-back/start-up, and such requests will be considered by ATC subject to delay.

The preferred use of intersection take-offs are set out in the table below.

Aircraft Type	RWY	Preferred TWY Intersection
All aircraft	10L	TWY N6
	28R	TWY N2
RJ85 type and all turboprops	10R	TWY S6*
	28L	TWY S1*
* Intersection take-offs RWY 10R/28L are not available during Low Visibility Operations		

3.4 Additional information on runway usage is available EIDW AD 2.21 NOISE ABATEMENT PROCEDURES Section 5

4. Mandatory ground handling of aircraft at Dublin Airport
All aircraft must avail of ground handling. All aircraft of less than 2 tonnes maximum certified AUW must avail of minimum handling i.e. ramp transport to/from departures and the aircraft

5. Aircraft Engine Test Runs

Permission for all test runs must be obtained from the Aerodrome Operator.

LOCATION	NOTES
ENGINE TEST SITE 1 (Adjacent to TWY W1)	Up to full power engine runs. Available for aircraft up to Code C plus Boeing 757 (max wingspan 42M). Operational hours 0730 - 2000HR Local Time Monday to Friday 0900 - 2000 HR Local Time Saturday, Sunday and Bank Holidays Lighting and movable jet blast fence available. Movable jet blast fence allows for engine runs to be carried out on the following heading range: 230° - 280°. Positioning outside the headings is not permitted for any aircraft type, other than ATR.
ENGINE TEST SITE 2 (Forecourt Cityjet Hangar)	Check starts, idle engine runs, running one engine at idle, for maintenance and post engine wash run are permissible. Ground engine runs WILL NOT exceed thirty minutes in duration and not above idle power. If a new engine is to be run for the first time, the Airside Operations and Safety Officers (AOSO) must be informed of this fact at the time of the request.

LOCATION	NOTES
ENGINE TEST SITE 3	Withdrawn from service.
ENGINE TEST SITE 4 (Apron Taxiway 6)	Available for all aircraft. Check starts, idle engine runs, running two engines at idle, for maintenance and post engine wash run are permissible. *Caution: No lighting or acoustic/safety barriers available.*
ENGINE TEST SITE 5 (Adjacent to Hangar 1)	Idle engine runs at Engine Test Site 5 are permitted for operators, running two engines, at idle, for maintenance and post engine wash runs. Permission required from the Resource Allocation Unit. *Caution: No acoustic/safety barriers available.*
Aircraft Stands	Aircraft engine test runs at idle speed not exceeding five minutes duration are permitted on all stands. Permission required from the Resource Allocation Unit. If greater then than 5mins up to 30mins permission is required from the AOSO. Only one engine is permitted to be running at any stage during the engine run. *Caution: No acoustic/safety barriers available.*
Location to be agreed	For aircraft larger than code C/B757 contact Resource Allocation Unit for agreed location and available times. Code C aircraft: 0800 - 2000HR local Monday to Friday, 0900 - 2000HR, Saturday, Sunday and Bank Holidays. Code D aircraft: 0900 - 2000HR local, Monday to Sunday, but not outside daylight hours. *Caution: No lighting or acoustic/safety barriers available.*

6. Apron Parking and Marshalling of Aircraft

6.1 Aircraft are prohibited from entering any stand without the guidance of a marshaller, or the Advanced Visual Docking Guidance System (AVDGS) where provided. For availability of AVDGS, see EIDW AD 2.9.1

6.2 In order to prevent dazzling the marshaller or the push-back crew, pilots are requested to switch off the aircraft landing lights when reaching or leaving the parking position and, when equipped with both a conventional red anti-collision light and a sequenced white strobe light system, to switch off the latter system as well.

7. Building Served Stands
Aircraft using building served stands are required to vacate stand immediately at scheduled departure time.

8. Rapid Exit Taxiway – S5, N3, N5
Rapid Exit Taxiways (RETs) at Dublin Airport are designed for a maximum exit speed of 50 KT. However it is expected that aircraft using the RET will normally exit the runway at circa 35KT.
Rapid Exit Taxiway Indicator Lights (RETILs) are provided.

9. Aerodrome Hotspot Facilities in the vicinity of thresholds Runways 28L and 34

9.1 The following details and associated diagram are provided for ease of familiarity with the aerodrome hotspot on this complex area of the aerodrome. The attention of all aircrews is drawn to the layout of taxiways, the location of holding positions, and the proximity of the thresholds of Runway 28L and Runway 34. Close attention must be paid to visual aids (markings, lighting, signage).

9.2 All taxiways are provided with location signs (yellow inscription on black background) and direction signs (black on yellow). Centreline markings and edge markings are also provided.

9.3 Mandatory signs, (white inscription on red background), are provided to identify locations which aircraft shall not pass unless authorised by ATC. These signs include runway designation signs, runway-holding position signs etc.

9.4 For normal visibility conditions, CAT I runway-holding positions are established on all taxiways which intersect with runways. The CAT I runway-holding position on Taxiway E1 is a combined position for Runway 10R/28L and Runway 16/34. CAT I runway-holding positions are also established on Runway 16/34, for aircraft taxiing along Runway 16/34 towards Runway 10R/28L, and on Runway 10R/28L for aircraft taxiing along Runway 10R/28L towards Runway 16/34. These holding positions are denoted by:

i. Yellow painted holding-position markings;

ii. Red mandatory markings, Indicating the Designation of the runway ahead;
iii. Red mandatory signs, including the designation of the runway ahead;
iv. Red controllable stop bar lights (where shown on Aerodrome Chart);
v. Yellow flashing runway guard lights (ICAO Configuration A);
vi. Location sign indicating the taxiway designation in yellow on a black background;

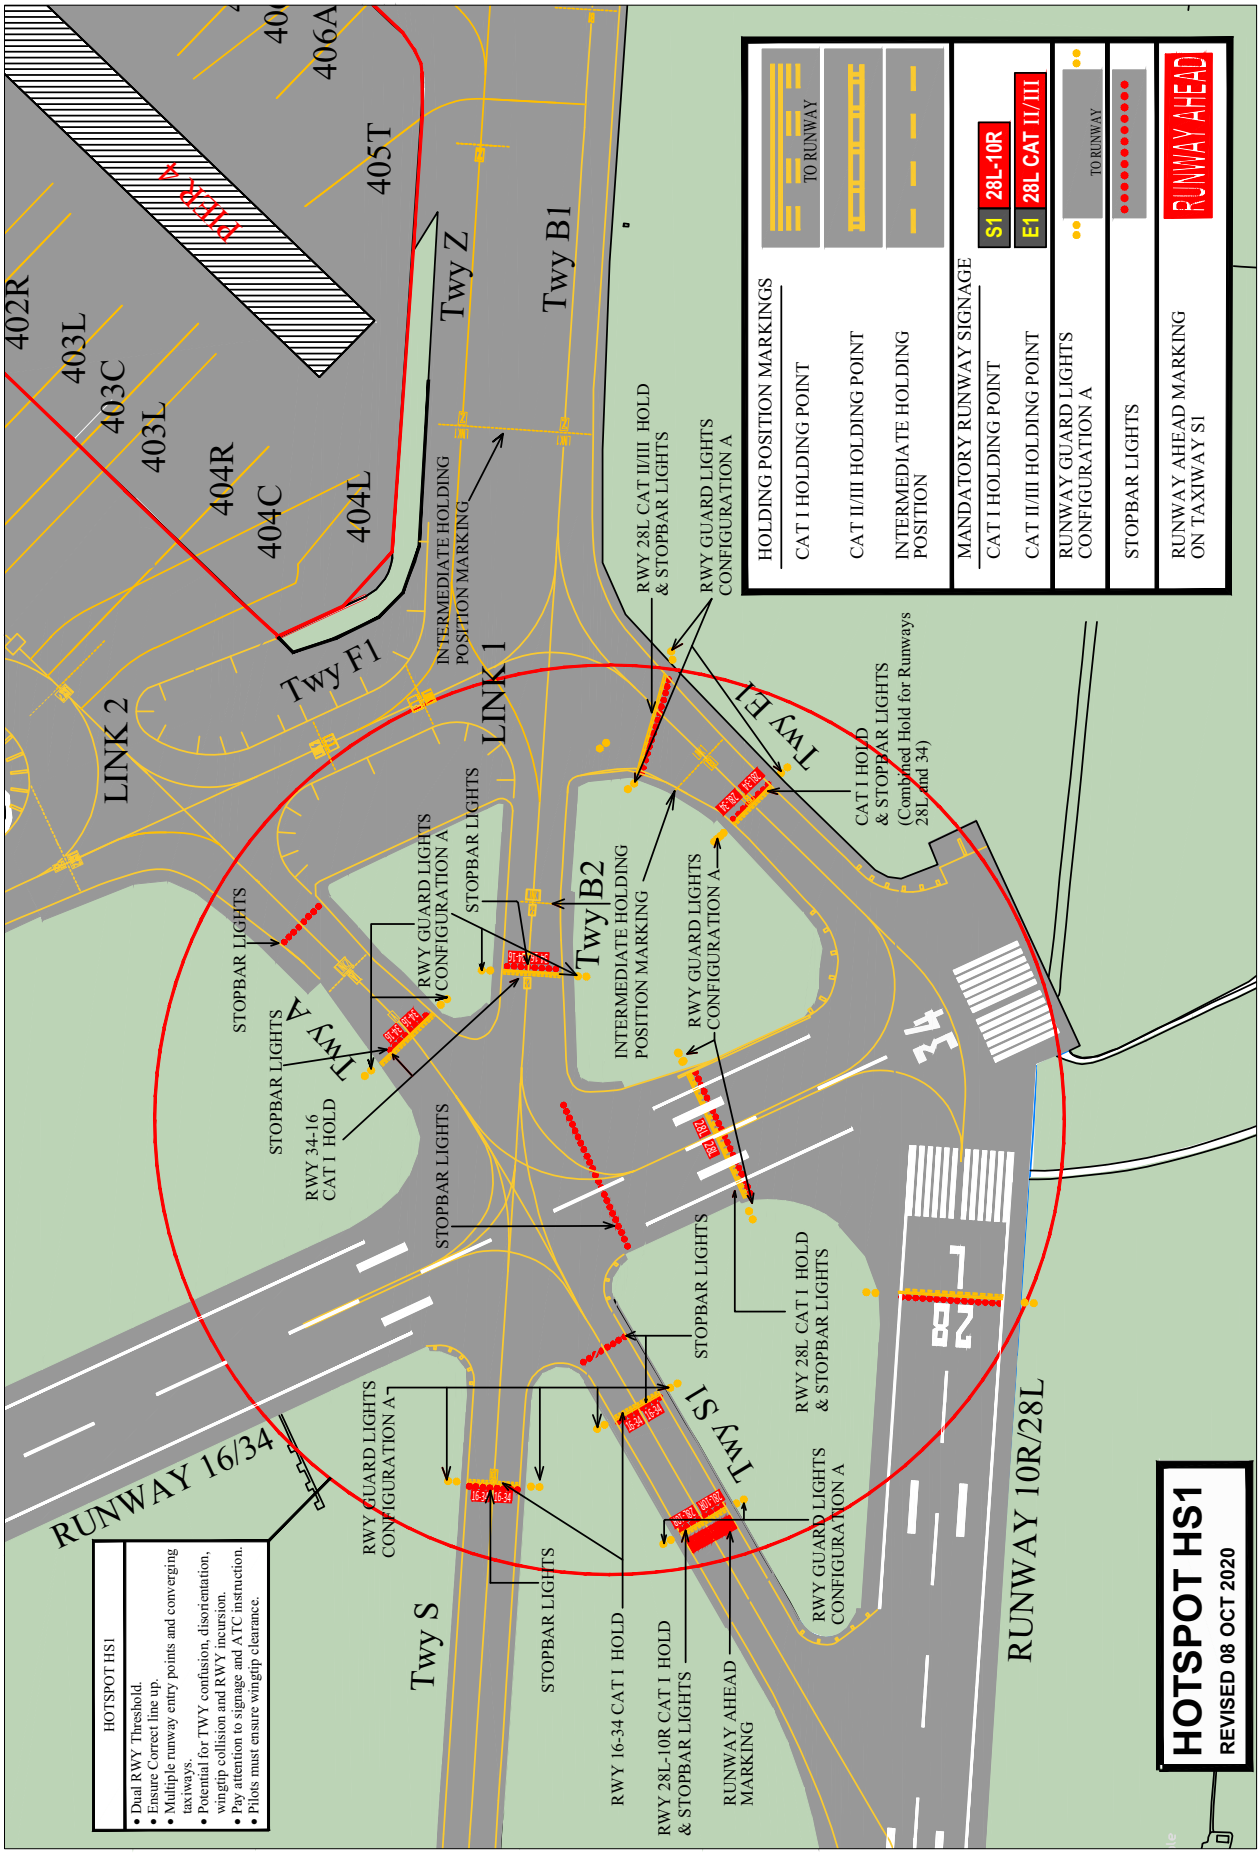
For low visibility conditions, a CAT II/III runway-holding position is established on Taxiway E1. This holding position is denoted by:

i. Yellow painted markings;
ii. Red mandatory signs with the inscription 28L CAT II/III;
iii. Red controllable stopbar lights;
iv. Yellow flashing runway guard lights (ICAO Configuration A);
v. Location sign indicating E1 in yellow on a black background;

9.5 Runway-holding positions cannot be passed without permission from ATC.

9.6 Aircrews are advised that should they become unsure of their position while taxiing, they should contact ATC immediately and request assistance.

9.7 Due to the close proximity of the two runways Runway 28L and Runway 34, aircrews taking off from Runway 28L or Runway 34 are advised to ensure that they are lined up on the correct runway before commencing take-off run.



HOTSPOT HS1
REVISED 08 OCT 2020
HOTSPOT HS1
• Dual RWY Threshold.
• Ensure Correct line up.
• Multiple runway entry points and converging taxiways.
• Potential for TWY confusion, disorientation, wingtip collision and RWY incursion.
• Pay attention to signage and ATC instruction.
• Pilots must ensure wingtip clearance.

10 Stop bars

Pilots shall not cross illuminated stop bars. A pilot receiving instructions which imply that an illuminated stop bar should be crossed shall wait until the stop bar is extinguished. If the stop bar remains illuminated, the pilot shall request confirmation from ATC that the stop bar is to be crossed. Instructions to cross illuminated stop bars will only be given in exceptional circumstances.

In the event of failure of the stop bar control mechanism, only TWY E1 (Runways 28L and 34), TWY S7 (Runway 10R) and TWY N4 (Runway 16) shall be used as line-up points.

In the event of failure of the stop bar control mechanism, the following line up points shall be used:

Runway	Line up Points
28L	E1 and RWY 16
10R	S7
16	N4
34	E1
28R	N2 and N1
10L	N6 and N7

The following phraseology shall be used by ATC to instruct pilots or vehicle drivers to cross an illuminated stop bar:

ATC: “[Callsign] Due to a failure of the control system, the stop bar will remain illuminated. Taxi/proceed across the stop bar on taxiway [designator] / runway [designator] Echo 1/Sierra 7/November 4 and line up RWY [designator] 34,28L,10R,16”

Reply:“[Call-sign] Lining up Runway [10R/28L/34/16 Designator] crossing stop bar” shall not cross illuminated stop bars. A pilot receiving instructions which imply that an illuminated stop bar should be crossed shall wait until the stop bar is extinguished. If the stop bar remains illuminated, the pilot shall request confirmation from ATC that the stop bar is to be crossed. Instructions to cross illuminated stop bars will only be given in exceptional circumstances. In the event of failure of the stop bar control mechanism, only TWY E1 (Runways 28L and 34), TWY S7 (Runway 10R) and TWY N4 (Runway 16) shall be used as line-up points.

11 **Airport Collaborative Decision Making (A-CDM)**

11.1 **Flight Plan Validation**

Three hours prior to the Estimated Off-Block Time (EOBT) of a flight, checks will be performed to verify the consistency between the ATC Flight Plan, Airport Slot and Airport Flight Data.

If the Scheduled Off-Block Time (SOBT) deviates from the EOBT, the relevant contact person will be informed and advised to adjust the times accordingly. Aircraft Operator (AO) or their Handling Agent (HA) is responsible for timely update of aircraft registration in the A-CDM portal (AOS).

11.2 **Target Off-Block Time (TOBT)**

This is the time that an Aircraft Operator or their Handling Agent estimates that an aircraft will be ready, all doors closed, boarding bridge removed, push back vehicle available, de-icing completed, and ready to start up/push back immediately upon reception of clearance from the Tower.
TOBT= Prediction of “Aircraft Ready”

11.3 **Automated TOBT**

120 minutes prior to the Estimated Off-Block Time (EOBT), the A-CDM portal (AOS) system will automatically generate a default Target Off-Block Time (TOBT).

11.4 **Person Responsible for TOBT**

The Aircraft Operator or their agent is responsible for entry, update and if necessary deletion of TOBT’s. It is the responsibility of the AO/HA to communicate and ensure the pilot of a flight has the correct TOBT prior to calling for

clearance. TSAT will also be included in DCL messages. If it becomes obvious that the TOBT cannot be respected, it shall be corrected or re-entered by the person responsible for the TOBT. Since the TOBT is used for various ground processes, it shall be updated by the person responsible for the TOBT when deviations of more than 5minutes occur.
For deviations of 15minutes or more from the EOBT, it will still be mandatory to send a delay message (DLA) to the Network Manager.

11.5 **TOBT Update/Deletion**

Until the TSAT has been issued (TOBT minus 40 minutes) the TOBT can be updated as often as desired. After the TSAT has been issued, the TOBT can be updated up to three times. If a sixth TOBT update is required the flights TSAT will be removed and the flight will get re-sequenced. It is important to recognise that once sequenced, changes to TOBT are likely to impact the aircraft's position in the Pre-Departure Sequence (PDS). TOBTs require updating if they differ by 5mins from the previous declared TOBT.
If a flight is to be taken out of the TOBT/TSAT calculation, the TOBT shall be deleted. The TOBT shall be re-entered by the person responsible for the TOBT.

11.6 **TOBT Reporting Routines**

The TOBT is viewed and or adjusted in one of the following ways:

- A-CDM Portal (AOS)
- AOS Mobile Application
- Internal system of the Airline/Handling Agent (via interface)
- By telephone via the Dublin Airport Control Centre (ACC), Phone + 353 (0) 1 814 4352
- Advanced Visual Docking Guidance System (A-VDGS) (specific stands)

11.7 **Target Start-up Approval Time (TSAT)**

The TSAT is the target time for start-up approval according to the Dublin A-CDM Operational procedures, taking into account TOBT, Calculated Take Off Time (CTOT), and/or the traffic situation. The earliest time for the TSAT calculation (by the PDS) is 40 minutes prior to TOBT.
TOBT is the time at which an Aircraft Operator, or his duly accredited representative expect the flight will be ready to commence movement; whereas the TSAT is the time at which Ground will grant the start-up.
It is the responsibility of the AO/HA to communicate the most up to date TSAT to the pilot, prior to doors closing.
The "Pre-Departure Sequence" is a result of the calculated TSATs.

11.8 **TSAT Reporting Routines**

The TSAT is transmitted in one of the following ways, via:

- A-CDM Portal (AOS)
- AOS Mobile application
- Internal system of the airline/Handling agent (via interface)
- Datalink Clearance (DCL). If a TSAT changes post clearance, ATC will communicate the revised TSAT verbally to the pilot. A revised DCL message will not be issued, post ATC clearance.
- Advanced Visual Docking Guidance System (A-VDGS) (specific stands)

11.9 **Start-up and Push-back**

The sequence of push and start is based on the TSAT sequence. The following rules apply:

- The Pilot shall report ready to push and start at TOBT (+/-) 5 minutes. (ATC clearance (including DCL) shall be requested any time prior to TOBT from delivery)
- The aircraft has to be ready for start-up at TOBT
- Ground will issue push and start approval at TSAT (+/-) 5 minutes
- If pilots have received their ATC clearance and called at TOBT and Ground has not called to give push and start approval by TSAT + 5minutes, pilots are requested to call Ground requesting push and start approval.

In case of delays (>5 minutes) after ATC clearance has been received and/or a call ready at TOBT has been made, pilot shall inform clearance of the delay and a new TOBT must be sent by the AO/HA.

11.10 **Datalink Clearances (DCL)**

For datalink departure clearance (DCL), the published procedures and the time parameters published in the AIP will remain valid. The TSAT will also be transmitted in DCL messages.

11.11 **De-icing**

De-icing must be completed before an aircraft can report ready for push and start. De-icing times shall be taken into account, to calculate the TOBT.

11.12 **Coordination with the Network Manager (NMOC)**

A permanent and fully automatic data exchange with the Network Operations will be established. This data transfer will enable highly accurate early predictions of landing and departure times. Furthermore, this will allow for more accurate and efficient calculation of the CTOT (when applicable) due to the use of local target take-off times. The following messages are used:

- Flight Update Message (FUM)
- Early Departure Planning Information Message (E-DPI)
- Target Departure Planning Information Message (T-DPI)
- ATC Departure Planning Information Message (A-DPI)

The basic Network Operations procedures continue to apply. The Network operations will generally take those local Target Take -Off Times (TTOT) into consideration, when updating the flights' profiles in its system. In some cases Clearance Delivery position will offer to coordinate a new CTOT (if applicable) in agreement with the pilot.

11.13 **Remote Holding**

In the event of a contact stand not being available, Dublin Airport will request a remote hold stand position from ATC. The Pre-departure Sequencer (PDS) will recalculate the variable taxi time from this new remote hold location.

11.14 **Contact and Information**

For the TOBT dialogue and the TSAT submission, all Aircraft Operators/Handling Agents have to appoint a person responsible for TOBT and give the details to the airport company.
VFR flights are not part of the A-CDM process and therefore do not require TOBTs to be entered.

11.15 **Contact Details**

For additional information and support documents on Dublin A-CDM, see link:
https://www.dublinairport.com/regulation-and-planning/regulatory/airport-cdm
Contact persons for the A-CDM procedure at Dublin Airport, are as follows:

EIDW AD 2.21 NOISE ABATEMENT PROCEDURES

1. Aircraft operators shall ensure at all times that aircraft are operated in a manner calculated to cause the least disturbance practicable in areas surrounding the airport.

2. Standard Instrument Departures

Strict compliance with SID is mandatory.

3. Other Instrument Departures

3.1 Cat A, B Aircraft

3.1.1 Cat A, B Aircraft (Non Jet)
After take-off, pilots should ensure that they are at a minimum altitude of 750ft QNH before initiating any turn. No take-off turn shall be commenced before the departure end of the runway.

3.1.2 Cat A, B Aircraft (Jet)
Departures must track the runway extended centreline after take-off until passing 750QNH before commencing turn. No take-off turn shall be commenced before the departure end of the runway.

3.2 Cat C, D Aircraft

3.2.1 Departures from all runways except Runway 10R, must track the runway extended centreline after take-off until passing 750ft and then proceed in accordance with the relevant Instrument Flight Procedure published departure track and adhere to published altitude/level restrictions unless otherwise cleared by ATC.

3.2.2 Departures from Runway 10R must track the runway extended centreline to 5NM before commencing turn to the north, or to 6NM before commencing turn to the south.

3.2.3 Take-off climb shall comply with the procedure detailed below, which is based on noise abatement departure climb guidance contained in PANS OPS Doc 8168 Vol 1 - Appendix to Chapter 3 - NADP2.

3.2.4 Take-off thrust, speed V^2 + 20 to 40 km/h (V^2 + 10 to 20kt).

3.2.4.1 At 240m (800ft) and while maintaining a positive rate of climb, body angle is reduced and flaps/slats are retracted on schedule as the aircraft is accelerated towards Vzf.

3.2.4.2 Power/thrust is reduced during the flap/slat retraction sequence at a point that ensures satisfactory acceleration performance.

3.2.4.3 (3000ft) Transition smoothly to en-route climb speed.

3.2.4.4 Cat C and D aircraft operating from Runway 28L directly to Weston or Baldonnel aerodromes are exempt from Sections 3.2.1, 3.2.2 and 3.2.3. These aircraft must not leave the environmental corridor below 1,500ft QNH.

4. Jet aircraft (Cat C/D) on visual approach to all runways must join final approach no closer than 6NM from touchdown. Aircraft must follow a descent path which will not result in being at any time lower than the approach path which would otherwise be followed using the ILS glide-path.

5. Runway 10L/R or 28L/R are the required Runways between 0600 and 2300HR Local Time when the crosswind component is 20KT or less. Runway 28L/R will be the preferential Runways when the tailwind component is 10KT or less and braking action is assessed as good. Aircraft will be required to use these Runways except when operational reasons dictate otherwise.
If the crosswind component on Runway 10L/R or Runway 28L/R is greater than 20KT Runway 16 or Runway 34 may become the active Runway. If the forecast crosswind component on Runway 10L/R or 28L/R is greater than 20KT Runway 16 or 34 may become the active Runway.
The use of Runway 16/34 will be kept to an absolute minimum subject to operational conditions.

6. Runways will be prioritised for noise abatement purposes between 2300 and 0600HR Local Time, subject to the same wind calculation method and values as used between 0600 and 2300HR Local time (see Section 5).

7. Reverse thrust should not be used during landing operations on any runway between 2300-0600HR Local Time, except where operational or safety reasons dictate otherwise.

8. Cat C and D aircraft using Runways 28L, 28R, 10L,16 and 34 shall operate within environmental corridors which are based on runway take-off flight path areas. The corridors have a width of 180 M at the departure end of the clearway, diverging at 12.5% on each side to a maximum width of 1800 M, and extending in length to 5 NM from the point of origin. The corridors extend vertically from surface to 3000 ft AMSL.

Cat C and D aircraft using Runway 10R shall operate within an environmental corridor which is based on the runway take-off flight path area. The corridor has a width of 180 M at the departure end of the clearway, diverging at 12.5% on each side to a maximum width of 1800 M, and extending in length from the point of origin to 5 NM for the northern boundary of the corridor and 6 NM for the southern boundary of the corridor. There is no upper vertical limit to this corridor

The corridors apply for departures from each runway and also for approaches to the reciprocal runway, except for circling approaches.

EIDW AD 2.22 FLIGHT PROCEDURES

1. Holding Areas

Protected airspace is provided for Holding Areas in accordance with the criteria contained in PANS-OPS ICAO Doc 8168, Volume II for basic holding areas.

For RNAV procedures, holding basic areas are based on aircraft having RNAV holding system functionality.

2. SID and STAR and IAP’s

2.1 **RNAV Equipped Aircraft**

SIDs and STARs and initial and Missed Approach segments of IAPs for all runways have been developed in accordance with ICAO Doc 8168 (PANS OPS).

The RNAV Specification is RNAV 1.
The supporting navigation infrastructure provided is DME/DME or GNSS.
Operators which have obtained operational and airworthiness approval, from their regulatory authority, may operate the RNAV SID and STAR procedures in accordance with the conditions of approval.

If the RNAV equipment fails, or navigation accuracy of +/-1 NM can not be maintained, inform ATC as soon as possible. Radar vectoring will be provided.

2.2 **RTF Phraseology**

Phraseology used will be as provided in the European Regional Supplementary Procedures (ICAO Doc 7030) and outlined in Eurocontrol Guidance material for RNAV SIDs and STARs.

Examples of phraseology for ATC are:

- {CALLSIGN} CLEARED {STAR designator} ARRIVAL, RUNWAY {designator}

Note: On such a clearance flight crew shall continue on route until reaching start point of the STAR.

- {CALLSIGN} ADVISE IF ABLE {designator} DEPARTURE [or ARRIVAL].

If ATC are unable to issue a requested SID or STAR:

- {CALLSIGN} UNABLE TO ISSUE (designator) DEPARTURE [or ARRIVAL] DUE [Reason]

Examples of pilot phraseology in the event of being unable to accept SID or STAR:

- UNABLE (designator) DEPARTURE [or ARRIVAL] DUE TO RNAV TYPE
- UNABLE RNAV DUE EQUIPMENT

2.3 **Non RNAV Equipped aircraft**

Non RNAV equipped aircraft will be assigned a clearance based on conventional navigation aids and/or vectoring.

2.4 Expected Approach Distance RWY 10L/R and RWY 28L/R
The expected approach distances are listed for all runways in ENR 1.10. The Lateral Holding/Point Merge STAR procedures (Chart AD 2.24-23 and AD 2.24-22) must be available in the aircraft navigation database.

3. Speed Control

Speed Restrictions

<table>
<tr><th>General</th><th>STAR</th><th>Holds</th><th>Initial Approach Segment (BTN HLDG Fix and IF)</th><th>Intermediate Approach Segment (BTN IF and FAP)</th><th>Final Approach Segment</th><th>Remarks</th></tr>
<tr><td>Below FL100, Max IAS 250KT or less.</td><td>As specified waypoints.</td><td>As specified on chart</td><td>IAS 210KT</td><td>IAS 180KT</td><td>BTN FAP and 4NM from THR IAS 160KT</td><td rowspan="2">1. ATC may request specific speeds for accurate spacing. Comply with speed adjustments as promptly as feasible within operational constraints.
2. If unable to comply with the above, advise ATC as soon as possible.</td></tr>
<tr><td></td><td></td><td></td><td></td><td></td><td>4NM to THR IAS as performance requires.</td></tr>
<tr><td colspan="7">Warning
Operators are advised of the probability of encountering a GPWS Terrain alert, for aircraft which are exceeding the standard speed restrictions, while at or below 5,000FT and which are in the vicinity of the hight terrain to the south of Dublin Airport.</td></tr>
</table>

4. Recommended Flight Planning for Peak Arrival Periods

For further information refer to ENR 1.10.7.1

5. Arrival Procedures

5.1 Clearance to enter the CTA and CTR

Aircraft flying the ATS Route system will be cleared into the CTA/CTR without having to request a specific entry clearance.

Arriving Aircraft will normally be cleared on a STAR appropriate to the route by ATC. On occasions ATC may radar vector aircraft for arrival (Due traffic or technical reasons).

5.2 Initial Approach Procedures

5.2.1 With radar control

In order to expedite the flow of traffic, aircraft may receive radar vectors on to final approach from the STAR.
For RWYs 16 & 34 pilots should plan their flight profile in such a manner as to be able to achieve 6000ft QNH at the appropriate hold.
For RWY 28L/R & 10L/R pilots should plan their flight profile on the sequencing leg to achieve level constraints.
ACTUAL DESCENT CLEARANCE WILL BE AS DIRECTED BY ATC.

5.2.2 Without radar control

When arriving traffic cannot be sequenced by radar, aircraft will be cleared to join the Instrument Approach Procedure appropriate to the landing from the hold.

5.3 Communications failure procedures for arriving aircraft

5.3.1 RWY16 & 34

Aircraft experiencing communications failure in the Dublin CTA/CTR shall set transponder code A7600 and comply with standard ICAO procedures.

5.3.2 RWY 28L/R and 10L/R

RWY 28L/R

5.3.2.1 Aircraft prior to Sequence Leg Entry

a. Squawk 7600.
b. Proceed via the STAR to enter the appropriate Sequence Leg Entry Hold (i.e. KERAV or SORIN) at the last cleared Flight Level.
c. Commence descent in the Hold to the Sequence Leg entry Flight Level (FL080 or FL070 as appropriate) specified on the chart at, or as close as possible to the expected approach time (EAT). If no EAT has been received and acknowledged descend at, or as close as possible to the estimated time of arrival resulting from the current flight plan.
d. Proceed onto the appropriate Sequence Leg, complete the full STAR as filed or last cleared by Dublin ATC, to LAPMO. After turning off the Sequence Leg descend to 3000ft QNH and complete the approach for landing on RWY28L.
e. **Aircraft flying the ABLIN(L) STAR losing R/T contact should squawk A7600 and should continue to fly the STAR (including the sequence leg from SIVNA onwards) and complete the approach.**

5.3.2.2 Aircraft on Sequence Leg

a. Squawk 7600.
b. Complete the full STAR to LAPMO or ABIVU, depending on the runway in use.
c. After turning off the Sequence Leg descend to 3000ft QNH and complete the approach for landing on RWY28L/R, depending on the runway in use.

5.3.2.3 Aircraft turned off the Sequence Leg

a. Squawk 7600
b. Descend to 3000ft QNH
c. In the most expeditious manner route to LAPMO/ABIVU to complete the instrument approach procedure for RWY28L/R, depending on the runway in use.

RWY 10L/R

5.3.2.4 Aircraft prior to sequence Leg Hold (ADNAL or BABON as appropriate) Squawk 7600

1. Proceed via the STAR to enter the appropriate Sequence Leg Hold (ie ADNAL or BABON) at the last cleared Flight Level

2. Commence descent in the Hold to the Sequence Leg Fight

3. Level (FL080 or FL070 as appropriate) specified on the chart at, or as close as possible to the expected approach time (EAT). If not EAT has been received and acknowledge descend at, or as close as possible to the estimated time of arrival resulting from the current flight plan.

4. Continue on the appropriate STAR Sequence Leg, complete the full STAR as filed or last cleared by Dublin ATC, to IFBAP or OSLEX as appropriate. After turning off the Sequence Leg descend to comply with the constraint altitude at IFBAP or OSLEX and complete the approach for landing on RWY10L/R, depending on the runway in use.

5.3.2.5 Aircraft on Sequence Leg.

a. Squawk 7600
b. Complete the full STAR and approach for RWY 10L/R, depending on the runway in use.
c. After turning off the Sequencing leg descend to comply with the constraint altitude at IFBAP or OSLEX and complete the approach on RWY 10L/R, depending on the runway in use.

5.3.2.6 Aircraft turned off the Sequence Leg

a. Squawk 7600
b. Descend to comply with the constraint altitude at IFBAP or OSLEX and complete the approach for landing on RWY 10L/R, depending on the runway in use.

5.3.3 Non RNAV capable Cat C/D aircraft.

Non RNAV capable Cat C/D aircraft should route, in the most expeditious manner, to the appropriate hold for the runway in use and hold using best navigation means available. From the hold proceed to, and complete in the most expeditious manner, the IAP for the runway in use.

6. Departure Procedures

6.1 Departure Clearance Service using Datalink (DCL)

6.1.1 Introduction

6.1.1.1 The DCL service uses the Aircraft Communications Addressing and Reporting System (ACARS). DCL messages are described in EUROCAE ED-85A Appendix A and ARINC 623-2.

6.1.1.2 DCL departure clearances are provided solely to those flights departing Dublin Airport.

6.1.1.3 Clearance Delivery Procedures via RT (voice) will be utilised in the event of datalink transaction failure.

6.1.1.4 Oceanic traffic can receive domestic clearances via ACARS.

6.1.2 Datalink procedure

6.1.2.1 The pilot will send a departure clearance request utilising the on-board datalink interface. Minimum 15 minutes before start-up. **Any slot times will be taken into account by the pilot in the request if appropriate**.

6.1.2.2 If the clearance is not received by the pilot within 3 minutes of the request the pilot will contact ATC through the normal RT communication channels and obtain a clearance on RT.

6.1.2.3 Where the pilot receives a Datalink reply and cannot accept the clearance he will contact ATC through the normal RT channels to obtain, an alternate clearance on RT.

6.1.2.4 If the pilot is satisfied with the Datalink clearance an acknowledgement message will be sent to the ground system.

6.1.2.4.1 If the ground system does not receive the acknowledgement message within 3 minutes after the clearance has been transmitted, or if an invalid message is received, ATC will contact the pilot through the normal VHF channels and issue the clearance via RT (voice).

6.1.2.5 All departure clearances issued through the normal VHF RT voice channels will cancel the DCL service.

6.2 RWY 28L, 28R, 10L, 10R, 16 and 34 - Standard Instrument Departures (SID)

Aircraft on IFR flights departing from RWY 28L, 28R, 10L, 10R, 16 and 34 will proceed in accordance with Standard Instrument Departures (SID) WHICH ALSO INCLUDE MANDATORY NOISE ABATEMENT ELEMENTS for jet aircraft.
Category C and D departures shall remain on DUBLIN TOWER frequency until passing 2,000ft, then contact DUBLIN ACC Lower North/DUBLIN ACC Lower South as appropriate.

Where ICAO obstacle clearance criteria require minimum climb gradient greater than 3.3% the required values will be included in the SID.

As a cross check to confirm the correct SID has been selected in the FMS, Category C and D departures will be requested by CDS to confirm the first waypoint on the SID e.g. RWY 10R “DW553”.

Non-Standard Departure Instructions - Pilots who cannot comply with any of the Standard Instrument Departure procedures must inform ATC in good time so that alternative clearances can be issued. A minimum climb gradient of 4.1 per cent applies to all alternate clearances.

Note: CAT A, B aircraft may be assigned a SID appropriate to CAT C, D aircraft at the discretion of ATC.
Note: CAT E aircraft will be assigned a SID appropriate to CAT C, D aircraft at the discretion of ATC

6.3 Communications failure procedures for departing aircraft

Aircraft experiencing communications failure in the Dublin CTA/CTR shall set transponder code A7600 and comply with standard ICAO procedures,

Supplemented by the following:

i. For aircraft departing on a SID where no cruising level has been specified in the enroute clearance (and therefore no level specified in the Current Flight Plan) the climb, after the appropriate time interval, shall be to the level contained in the Filed Flight Plan.

ii. Aircraft routeing on a ROTEV SID expecting transition to BOYNE
Aircraft routeing on a ROTEV SID experiencing communications failure, and expecting transition to BOYNE, should continue to ROTEV, then, in the most expeditious manner, route to BOYNE to join the Current Flight Plan route. Maintain the last assigned level for a period of three minutes, and then climb to the level specified in the Current Flight Plan.

7. Low Visibility Procedures

7.1. Low Visibility Procedures

Low Visibility Procedures apply when the cloud ceiling is below 200 ft (60M) and/or the IRVR is less than 550M or the meteorological visibility is less than 800M.

When Low Visibility Procedures are in force the following standard taxi route system applies:

Table 1: Single Runway Operations Runway 28L

RUNWAY	TO/FROM	ARRIVAL TAXI ROUTE	DEPARTURE TAXI ROUTE	APRON TAXI ROUTES
28L	South and Main Apron (South of Link 4)	S5 or S7 to S, W2, M1	B1 to E1 or Link 2, F1 to E1 or Link 3, F2, F1 to E1	All except Z
28L	Main Apron (Link 4 to Link 6)	S5 or S7 to S, W2, RWY34, N, F-Outer	F3, F2, F1 to E1	All except Z
28L	North Apron	S5 or S7 to S, W2, RWY34, N, K	AT6, DN/DS/C, F-Outer/Inner, F3, F2, F1 to E1	All except Z
28L	West Apron (Northern stands)	S5 or S7 to S, W2, W3	W3, W2, M1, F3, F2, F1 to E1	All except Z
28L	West Apron (Southern stands)	S5 or S7 to S, W2	W2, M1, F3, F2, F1 to E1	All except Z
28L	Main Apron If Holding for a stand	S5 or S7 to S, W1	N/A	All except Z

Table 2: Single Runway Operations Runway 10R

RUNWAY	TO/FROM	ARRIVAL TAXI ROUTE	DEPARTURE TAXI ROUTE	APRON TAXI ROUTES
10R	South and Main Apron (South of Link 4)	E1, B1/F1 or S2, W1, H1	B1, F1, F2, F3, M1, W2, S to S7 or Link 2, F2, F3, M1, W2, S to S7 or Link 3, F3, M1, W2, S to S7	All except Z
10R	To South Apron if Holding for a stand	S1, B2	N/A	B1
10R	Main Apron (Link 4 to Link 6)	E1, F1, F2, F3 or S2, W1, H1	F-Outer/Inner, N, RWY16, W2, S to S7	All except Z
10R	North Apron	E1, F1, F2, F3, F-Outer/Inner or S2, W1, H1, F-Outer/Inner	AT6 or DN/DS/C, K, N, RWY16, W2, S to S7	All except Z
10R	West Apron (Northern stands)	E1, Link 4, M1, W2, W3 or S2, W1, H1, M1, W2, W3	W3, W2, S to S7	All except Z
10R	West Apron (Southern stands)	E1, Link 4, M1, W2 or S2, W1, H1, M1, W2	W2, S to S7	All except Z

RUNWAY	TO/FROM	ARRIVAL TAXI ROUTE RWY 10L	DEPARTURE TAXI ROUTE RWY 10R	APRON TAXI ROUTES
10	South and Main Apron (South of Link 4)	N3 or N1 to N, RWY16, M1	B1, F1, F2, F3, H1, W1, S to S7 or Link 2, F2, F3, H1, W1, S to S7 or Link 3, F3, H1, W1, S to S7	All except Z
10	Main Apron (Link 4 to Link 6)	N3 or N1, F-Outer	H1, W1, S to S7	All except Z
10	North Apron	N3, N, F-Outer or N1, K, ATC or AT6	AT6 or DN/DS/C, F-Outer, H1, W1, S to S7	All except Z
10	West Apron (Northern stands)	N3 or N1 to N, RWY16, W2, W3	W3, W2, S to S7	All except Z
10	West Apron (Southern stands)	N3 or N1 to N, RWY16, W2	W2, S to S7	All except Z

Note: Code C aircraft shall not be instructed to push back onto Taxiway Foxtrot Outer during Low Visibility Operations.

CAT II/III holding positions will apply as follows:

Departure Runway	CAT II/III Holding Position
RWY 28L	TWY E1
RWY 10R	TWY S7
RWY 28R	TWY N2
RWY 10L	TWY N6

TWY/stopbar/centreline lighting will be in use.

Pilots will be informed by ATIS broadcast or RTF when Low Visibility Procedures have been initiated.

Full details of low visibility operations are available on request from AD Administration (EIDW AD 2.2)

A maximum taxiing speed limit of 15KT applies to all aircraft during the periods when Low Visibility Procedures are in force.

7.2. Low Visibility Take Offs (LVTOs)

During LVP Operations, LVTOs are permitted from Runway 10R/28L and Runway 10L/28R.
It is the at the discretion of the PIC to depart based on their airline operating procedures in LVP conditions.
Take-offs are not available when IRVR values fall below 125m for the runway in use.
All IRVR readings for the departure runway in use must show 125m or greater.
ATC shall inform departing pilots when any IRVR values for the departure runway falls below 125m.

8. Holding Procedures

A standard rate of descent of between 500ft and 1000ft per min in holding patterns will be used unless otherwise instructed by ATC.

9. Operation of Mode S transponders on the Movement Area.

Mode S transponders shall be operated on the Movement Area in accordance with the following provisions:

9.1 Departing aircraft:

i. Set aircraft identification and, when received, set assigned Mode A code.
ii. Immediately prior to request for push back or taxi, or when advising Clearance Delivery that you are ready for push and start, whichever is earlier, select: “Automatic mode” (e.g.: AUTO) or, if automatic mode is not available, select “on” (e.g. ON or XPDR),
iii. Only when approaching the holding position of the departure runway, select “TCAS” (e.g.: TA/RA).

9.2 Arriving aircraft:

i. As soon as practicable after landing de-select “TCAS” (e.g.: deselect TA/RA),
ii. Select “automatic mode” (e.g.: AUTO) or, if automatic mode is not available, select “on” (e.g. ON or XPDR),
iii. Continue to squawk last assigned Mode A code until fully parked, When fully parked, select “standby” (e.g.: STBY).

10. VFR Procedures, Dublin CTR/CTA and environs

10.1 Flight Plan

Flight Plans are mandatory for flights within Dublin CTR/CTA. Flights planned to transit EIR23, EIR15, EIR16 should include this information in field 15 of the Flight Plan
Flights planning to enter or leave Dublin CTR should, when practicable, indicate in item 16 of the Flight Plan, an alternate aerodrome situated outside Dublin CTR.
Where the flight destination is not an aerodrome licensed for public use, the address of the place of intended landing together with the name and telephone number of the property owner should be indicated in field 18 of the Flight Plan.

10.2 Special VFR is available within Dublin CTR in accordance with the provisions of EU Reg. No 923/2012 - SERA.5010 Special VFR in control zones.

10.3 Flight Information Service is provided H24. When required and as promulgated by ATIS, a discrete frequency (118.500 MHz) is allocated to the provision of FIS for aircraft in class G airspace.

10.3.1 Low Flying Aircraft Radio Communications

When flying at low level, in or around mountainous terrain or in other regions with poor radio communication, radio transmissions to and from ground might not be possible due to obstacles affecting line of sight VHF radio communications.
Aircraft at low level <1500ft (where the radio horizon is roughly 55 miles/90km) and below may have difficulties establishing and/or maintaining radio communication with Dublin FIS radios located at Dublin Airport in the area

south of the Wicklow mountains or at the boundaries of the Dublin CTA due to radio horizon and radio line of sight due to terrain obstacles, coupled with the aircraft antennas fitted.

Aircraft should consider problems with establishing and/or maintaining radio communication with Dublin FIS.

10.4 Landing Lights should be shown at all times during flight within Dublin CTR.

10.5 ATC Clearances for flights departing from within Dublin CTR.

Prior to departure

i. From Dublin Airport by request for start up to Dublin Ground, 122.985MHz or 121.800 MHz if non 8.33kHz equipped.

ii. Other than Dublin Airport

- Contact Dublin ATC by telephone for prior approval
- Request for start/lift to Dublin Tower from frequency issued in prior approval
- If no RTF two-way communication can be established, contact Dublin ATC by telephone and request a time for take off / Lift off.

Take off / Lift without prior two-way communications with Dublin ATC is not permitted.

10.6 **ATC Clearances for flights arriving to destinations within Dublin CTA/CTR**

Prior to penetration of Dublin CTA/CTR, by submitting a request at least 10 minutes before ETA at the airspace boundary to the relevant ATSU as follows:

a. Dublin Tower:

- 118.600 MHz for entry to the Dublin CTR South of Dublin Airport
- 124.680 MHz for entry to the Dublin CTR North of Dublin Airport (non 8.33kHz equipped aircraft contact 128.800);

b. Dublin ACC Lower North, Channel 132.580 for entry to the Dublin CTA, North Sector;

c. Dublin ACC Lower South, 120.755 for entry to the Dublin CTA, South Sector.

d. Dublin ACC, for entry to the Dublin CTA, non 8.33 kHz equipped, 124.650 MHz or 126.250 MHz

Note: Dublin ACC Lower North Sector is divided from Dublin South Sector by a boundary line extending along the extended centreline of RWY 10R/28L.

10.7 VFR Routes

10.7.1 **Flights departing/arriving at Dublin Airport are normally cleared as follows:**

i. North arrivals/departures: via Skerries VFR Route or Naul Town VRP

ii. West arrivals/departures: via Skerries VFR Route, Dunshaughlin VFR Route or Naul Town VRP

iii. South arrivals: As instructed by Dublin Tower

iv. South West arrivals

- Fixed wing flights to enter the Dublin CTR at The Square, Tallaght, Dunshaughlin VRP, Naul Town VRP or Skerries VRP
- Helicopter flights to enter Dublin CTR at Redcow Roundabout or The Square, Tallaght

v. South departures

- As instructed by Dublin Tower,
  or
- Flights intending to transit EIR15 are cleared to either Palmerston Roundabout Hold or Marley Park Hold to await onwards clearance from Baldonnel Tower.

10.7.2 **Flights with departure/destination other than Dublin Airport are normally cleared as follows:**

i. North arrivals/departures
- As directed by Dublin ATC, or
- Skerries VFR route or Naul Town VRP.

ii. West arrivals/departures
- As instructed by Dublin ATC, or
- Skerries VFR Route, Dunshaughlin VFR route or Naul Town VRP.

iii. South west arrivals
- As instructed by Dublin ATC, or
- Helicopter VFR flights to enter Dublin CTR at Red Cow Roundabout or The Square, Tallaght. or
- Fixed-wing VFR flights to enter the Control Zone at Dunshaughlin VRP, Naul Town VRP or Skerries VRP.

iv. South arrivals as instructed by Dublin ATC.

v. South departures
- As instructed by Dublin ATC, or
- Flights intending to transit EIR15 route to either the Palmerston Roundabout Hold or the Marley Park Hold to await onwards clearance from Baldonnel Tower

vi. Weston arrivals from the East
- As instructed by Dublin ATC, or
- Weston VFR Route

10.8 Visual Holding Patterns

Visual Holding Patterns for category A aircraft are established as follows:

10.8.1 Broad Meadow Bridge (532756.45N 0061125.11W (WGS-84)

Left-hand pattern, based on the M1 motorway bridge, which crosses the Broad Meadow estuary.
Outbound leg is 1 minute, flown at 90KT IAS. Inbound track 187° M. Minimum holding altitude is 1000ft QNH.
The following criteria also apply:
On arriving overhead the Fix, left turn onto the outbound leg should be initiated before the southern shore of the Broad Meadow estuary.
Left turn onto the inbound leg to the Fix should be completed to the east of the M1/N1 road.
The inbound leg to the fix should remain east of the M1/N1 road at all times.
Broad Meadow Bridge Holding Pattern is not available when Runway 10L is in use.

10.8.2 Palmerston Roundabout (532124.26N 0062303.57W (WGS-84)

Left-hand pattern, based on the Palmerston roundabout, which intersects the M50 motorway and the M4/N4 road.
Outbound leg is 1 minute, flown at 90 KT IAS. Inbound track 277° M. Minimum holding altitude is 1700ft QNH.

10.8.3 Marley Park House (531636.19N 0061601.09W (WGS-84)

Right hand pattern, based on Marley Park House, a large manor house inside the grounds of Marley Public Park.
Outbound leg is 1 minute, flown at 90KT IAS. Inbound track 284° M. Minimum holding altitude is 1700ft QNH.

10.8.4 Other Visual Reporting Points (VRPs) (WGS-84)

10.9 Circuit Operation,

Dublin Airport Circuit training is not permitted at Dublin Airport.

10.10 Radio Communications Failure Procedures – VFR Traffic

10.10.1 Departure Traffic

Proceed in accordance with the ATC clearance last received and acknowledged and land at the most suitable aerodrome located outside Dublin Control Zone. Report arrival to an appropriate ATC unit by the most expeditious means.

10.10.2 Arrival Traffic

If outside the control Zone, proceed with the flight plan route, remaining clear of the Control Zone and comply with flight plan closure procedures, or

If within the Control Zone, EXIT, ensuring that the aircraft remains clear of Dublin Aerodrome and the approach and Take off path of the Runway(s) in use.

EIDW AD 2.23 ADDITIONAL INFORMATION

Refer to ENR 5.6 for bird hazard information.

Bird Hazard Information

Migrating birds over flying airfield between 1000ft to 10000ft. Possible strikes for both arriving and departing aircraft. Also possible increase in bird strikes from seagulls on days of low pressure due to gulls coming inland.

Refer to ENR 1.6 2.8 Monitoring Codes

Code F

Dublin Airport has a minimal capacity to handle Code F aircraft for diversions, exceptional and planned movements. Operators should give as much advance notice as possible to ensure sufficient resources are in place.

Dublin Airport is available for B777-800 and B777-900 aircraft operation. If the wing tips fail to fold after the landing at Dublin Airport, pilot is required to inform ATC and request a follow-me service to stand. Pilots must proceed with caution and follow all the instructions from the follow-me provider.

Helicopter Operations

Helicopter operations are not permitted at Dublin Airport, unless, prior approval has been granted and the Helicopter has originated from an Aerodrome with a CPSRA. Only Search and Rescue Helicopters are exempt from this requirement.

Provision of information to the IATA Standard for AOS:

1. daa requires that airlines and handling agents submit messages for inbound and outbound Dublin Flights, in the standard format described in the IATA Airport Handling Manual.

2. The address that all the SITA messages shall be sent to is DUBRN7X.

3. The following are the three principal message types to be submitted to daa:

   a. Load messages (AHM 583).

   b. Statistical load summary (AHM 588).

   c. Aircraft movement message (AHM 780).

4. Passenger Services Messages (PSMs) and Passenger Transfer Messages (PTMs) are also processed by the AOS. A standard format is required. Examples of the appropriate formats for these and other message types, including those related to passengers are available on the Dublin Airport Operations Library.

NOTE 1: * DATA WHOSE ACCURACY HAS NOT BEEN QUALITY ASSURED.
NOTE 2: STANDS HP1 AND HP2 ARE USED FOR ENGINE START-UP/SHUT DOWN ONLY.
NOTE 3: RESPONSIBILITY FOR CONTROL OF SURFACE TRAFFIC ON THE:- APRON - RESTS WITH THE AIRPORT AUTHORITY. MANOEUVRING AREA - RESTS WITH THE AIR TRAFFIC SERVICES. THE SERVICE PROVIDED BY ATC ON THE APRON IS ON AN INFORMATION ONLY BASIS.
NOTE 4: THE COORDINATES PROVIDED REPRESENT THE FRONT NOSE-IN POINT OF THE STAND.
NOTE 5: AIRCRAFT ARE PROHIBITED FROM ENTERING ANY STAND WITHOUT THE GUIDANCE OF A MARSHALLER, OR THE ADVANCED VISUAL DOCKING GUIDANCE SYSTEM (AVDGS) WHERE PROVIDED (SEE EIDW AD 2.9.1).
NOTE 6: REFER TO CURRENT AIP SUPPLEMENTS FOR DETAILS OF STANDS NOT SHOWN ON THIS CHART.
NOTE 7: SOME OF THE TAXI IN/PUSH OUT STANDS MAY BE USED BY BUSINESS/ GENERAL AVIATION AS SELF-MANOEUVRING, BASED ON LOCAL AGREEMENT AND PRIOR APPROVAL TO MITIGATE THE CAPACITY RESTRICTIONS.

EINN AD 2.1 AERODROME LOCATION INDICATOR AND NAME

EINN –SHANNON/International

EINN AD 2.2 AERODROME GEOGRAPHICAL AND ADMINISTRATIVE DATA

1	**ARP and its site**	524207N 0085529W Mid Point RWY 06/24
2	**Direction and distance from (city)**	25KM (13.5NM) WNW of Limerick City
3	**AD Elevation, Reference Temperature & Mean Low Temperature**	46ft AMSL/20.2°C (Max Temp) 0.7°C (MNM Temp)
4	**Geoid undulation at AD ELEV PSN**	189ft
5	**MAG VAR/Annual change**	04º W (2019)/11' decreasing
6	**AD Operator, address, telephone, telefax, email, AFS, Website**	Post: Shannon Airport Authority Shannon Airport Co Clare Phone:+ 353 61 712 000 Fax: + 353 61 471 719 Telex: SAF EI72016 AFS: EINNYDYX
7	**Types of traffic permitted (IFR/VFR)**	IFR/VFR
8	**Remarks**	Nil

EINN AD 2.3 OPERATIONAL HOURS

1	**AD Operator**	H24
2	**Customs and immigration**	H24
3	**Health and sanitation**	H24
4	**AIS Briefing Office**	H24
5	**ATS Reporting Office (ARO)**	H24

7	**ATS**	H24
8	**Fuelling**	H24
9	**Handling**	H24
10	**Security**	H24
11	**De-icing**	H24 for scheduled operations, otherwise PN required
12	**Remarks**	Nil

EINN AD 2.4 HANDLING SERVICES AND FACILITIES

1	**Cargo handling facilities:**	AVBL from Swissport and Sky Handling Partners
2	**Fuel/oil types**	JET A1Fuel, Oil Grades: 80, 100, 120; Turbo Oils: 300, 390, 2380; Hydraulic Oils: 500B; Others PN
3	**Fuelling facilities/capacity**	PN required for operators not having standing arrangements
4	**De-icing facilities**	Contact Airport Operations

5	**Hangar space available for visiting aircraft**	Contact Airport Operations
6	**Repair facilities for visiting aircraft**	AVBL from Atlantic Aviation, LTSL, Signature, Aer Lingus, and Westair Aviation
7	**Remarks**	Nil

EINN AD 2.5 PASSENGER FACILITIES

1	**Hotel(s) at or in the vicinity of AD**	At Airport
2	**Restaurant(s) at or in the vicinity of AD**	1200 seats
3	**Transportation possibilities**	Buses, Taxis, Car Hire
4	**Medical facilities**	RFFS trained Cardiac and Emergency first responders, First Aid at Airport
		Hospitals – Limerick, Ennis
		Doctor on request, call out charge
		Cardiac ambulance available on request
5	**Bank and Post Office at or in the vicinity of AD**	ATM's and Bureau de Change at Airport
		Post Office, Shannon Town Centre – 2M
6	**Tourist Office**	Tourist Information Provided
7	**Remarks**	Short term Car Parking - 310 spaces
		Long term Car Parking - 4900 spaces

EINN AD 2.6 RESCUE AND FIRE FIGHTING SERVICES

1	**AD category for fire fighting**	Category 9 available Daily 0600-2200 UTC Category 7 available Daily 2200-0600 UTC Category 9 available by arrangement 12HR PN
2	**Rescue equipment**	Equipment to meet ICAO requirements.
3	**Capability for removal of disabled aircraft**	Up to Code C aircraft (Utilising equipment available externally). Contact the Co-ordinator Phone: + 353 61 712 497/+353 87 242 3371
4	**Remarks**	**Communication with Rescue and Fire Fighting Service** Frequency 121.600MHz AVBL for direct communication between ACFT and Rescue and Fire Fighting Service. 121.600MHz should be requested initially via ATC. Call sign for the Rescue and Fire Fighting Service is "Shannon Fire". It is mandatory for both ACFT and Rescue and Fire Fighting Service to maintain contact with ATC at all times. ATC do not have access to 121.600MHz. Frequency 121.600MHz is H24 and is AVBL within 8NM radius of Shannon Airport.

EINN AD 2.7 RUNWAY SURFACE CONDITION ASSESSMENT AND REPORTING AND SNOW PLAN

1	**Type(s) of clearing equipment**	Aerodrome is serviceable during all seasons, 2 De-icing Vehicles, 1 Sweeper
2	**Clearance priorities**	1. Duty Runway and associated taxiways, aircraft parking stands and apron areas. 2. Other Airside areas.
3	Use of material for movement area surface treatment	1. Urea 2. Potassium Acetate Fluids KAC

4	Specially prepared winter runways	Not applicable
5	**Remarks**	Annual snow plan available for SAA Operations Maintenance on request. Refer to Aerodrome Manual or contact Airport Operations: Phone:+ 353 61 712 497

EINN AD 2.8 APRONS, TAXIWAYS AND CHECK LOCATION DATA

EINN AD 2.20 LOCAL TRAFFIC REGULATIONS

1. Taxiing Restrictions

Runway 06/24 180 Degree turns by Code C and D aircraft are permitted on condition that the aircraft is turned at a low constant speed (5 to 8 Kts) with minimal thrust to avoid the inboard main landing gear wheel becoming stationary (spot turns must be avoided).

180 Degree turns by Code E and F aircraft are permitted only at runway ends and must follow the marked taxi line and use the minimum speed necessary to complete the turning manoeuvre.

Location	Situation	Restriction
East Apron	All Operations	Movement between East Apron from intersection of Taxiway D1 and Hanger 20 or vice versa is restricted to aircraft under power with a wingspan less than 36m (Code C) All other aircraft are to be towed, contact airport operations in advance.
Twy C	All Operations	Restricted to daylight hours only and aircraft with wingspan less than 36m. No left turn permitted from TWY C onto TWY D2. No right turn permitted from TWY D2 (southbound) onto TWY C

2. Marshalling Services
Marshalling Service is mandatory for all arriving aircraft intending to park on either the West, Central or East Aprons.
Marshalling Service is otherwise available on request from the Airport Operations Office

Phone:+ 353 61 712 240

or

Phone:+ 353 61 712 241

Use of the Marshalling Service does not imply the necessity to avail of full handling services.

3. Availability of Intersection Take-Off's

3.1 Take-off's using less than the full length of the runway are available from TWY/RWY intersections as listed in EINN AD 2.13 DECLARED DISTANCES
The datum from which the reduced declared distances on Runway 06/24 are measured is the intersection of the extended downwind edge of the specific taxiway with the runway edge, projected perpendicular to the runway centreline.

3.2 The take-off run available (TORA) is displayed on an illuminated sign adjacent to the taxiway.

3.3 Intersection take-off's are subject at all times to pilots' discretion and aircraft operational requirements. Pilots should advise as early as possible of their ability to accept intersection take-off's.

3.4 Approval for intersection take-off's is subject to the air traffic situation.

EINN AD 2.21 NOISE ABATEMENT PROCEDURES

Aircraft operators shall ensure, at all times that aircraft are operated in a manner calculated to cause the least disturbance practicable in areas surrounding the airport.

EINN AD 2.22 FLIGHT PROCEDURES

1. Holding areas
Protected airspace is provided for Holding Areas in accordance with the criteria contained in PANS –OPS ICAO Doc 8168, Volume II to facilitate navigation using VOR, NDB and DME navigation aids.

2. SID and STAR

2.1 RNAV Equipped Aircraft

SIDs and STARs for RWY24 and RWY06 have been developed in accordance with ICAO Doc 8168 (PANS OPS) and comply with EUROCONTROL guidelines for the design of Terminal Procedures for Area Navigation.

The supporting navigation infrastructure includes the choice of DME/DME, GNSS, VOR/DME (for reversionary navigation purposes) and INS/IRS as permitted by the Aircraft Flight Manual (AFM) and/or approved by the appropriate regulatory authority.

Use of DME/DME may not be available below about 6000ft where terrain may obstruct line of sight with the DME infrastructure.

Operators which have obtained operational and airworthiness approval, from their regulatory authority, may operate the RNAV SID and STAR procedures in accordance with the conditions of approval including

- P-RNAV certificated aircraft;
- B-RNAV certificated aircraft only above MSA;

Climb to MSA on the initial segments of the RNAV SID may be conducted using conventional navigation.

If the RNAV equipment fails, or navigation accuracy of +1 NM can not be maintained, inform ATC as soon as possible. Radar vectoring will be provided.

2.2 RTF Phraseology

Phraseology used will be as provided in the European Regional Supplementary Procedures (ICAO Doc 7030) and outlined in EUROCONTROL Guidance material for RNAV SID and STAR.

Examples of phraseology for ATC are:

{CALLSIGN} CLEARED {STAR designator} ARRIVAL, RUNWAY {designator}.

Note: On such a clearance flight crew shall continue on route until reaching start point of the STAR.

{CALLSIGN} ADVISE IF ABLE {designator} DEPARTURE [or ARRIVAL].

If ATC are unable to issue a requested SID or STAR:

{CALLSIGN} UNABLE TO ISSUE (designator) DEPARTURE [or ARRIVAL] DUE [Reason]

Examples of pilot phraseology in the event of being unable to accept *SID* or *STAR*

UNABLE (designator) DEPARTURE [or ARRIVAL] DUE TO RNAV TYPE.

UNABLE RNAV DUE EQUIPMENT

3. Visual Manoeuvring Approaches
Visual manoeuvring (circling) approaches are permissible, on request, to all runways.

4. Speed Control – General Provisions
Speed Restrictions

General	Routeing to Holds	Initial Segment	Final Approach	REMARKS
Below FL100, Max IAS 250KT	At DERAG and ELPOM, Max IAS 220KT	Max IAS 210KT	Recommended IAS 160 KT from FAF to OM	1. ATC may request specific speeds for accurate spacing. Comply with speed adjustments as promptly as feasible within operational constraints. 2. If unable to comply with the above, advise ATC as soon as possible

5. Arrival Procedures

5.1 Clearance to enter the CTA and CTR

Arriving Aircraft capable of flying STAR will normally be cleared on a STAR appropriate to the route by ATC. On occasions ATC may radar vector aircraft for arrival (Due traffic or technical reasons).

Standard Arrivals Routes used in the Shannon CTA are based on Holding Patterns at DERAG and ELPOM.

5.2 Initial Approach Procedures.

5.2.1 With Radar Control

In order to expedite the flow of traffic, aircraft may be cleared on STAR, or may receive radar vectors on to final approach track from the hold or earlier on the Standard Arrival Route.

Pilots should plan their flight profile in such a manner as to be able to achieve the Minimum Holding Level at the appropriate hold.

Actual descent clearance will be as directed by ATC.

5.2.2 Shannon (EINN) Arrivals - Caution - Shannon Approach Airspace is a Level Bust Hotspot Area. Ensure altimeter set to Hectopascals (HPA) when instructed by Shannon Approach.

5.2.2.1 Surveillance Minimum Altitude Chart (EINN AD 2.24-16.1)
ALTITUDE TEMPERATURE CORRECTION TO 0°C is taken into account in determining minimums. For temperatures below 0°C altitude correction will be managed by ATC.

5.2.3 Without Radar Control.
When RADAR is not serviceable, aircraft will be cleared to join the instrument approach procedure appropriate to the landing direction from the appropriate hold.

5.2.4 Communications failure procedures for arriving aircraft.

Aircraft experiencing communications failure in the Shannon CTR/CTA shall set transponder code A7600 and comply with standard ICAO procedures.

Supplemented by the following:

Traffic cleared on STAR

Aircraft cleared on a STAR and experiencing a Communications failure shall follow the route of the STAR at the last cleared level or altitude. On reaching the appropriate hold fix, descend to 3000ft and complete the instrument approach procedure appropriate to the Runway in use.

Traffic Radar vectored to final approach

Aircraft being radar vectored to final approach should join, in the most expeditious manner, and complete the Instrument Approach procedure appropriate to the Runway in use.

If unable to comply with above, or uncertain of position, climb to 3000ft QNH, proceed in the most expeditious manner to the hold appropriate to the Runway in use and complete the Instrument Approach Procedure appropriate to the Runway in Use

6. Departure Procedures

6.1 RWY's 06 and 24

Aircraft capable of complying with Standard Instrument Departures will proceed in accordance with the SID.

If an aircraft is unable to comply with Standard Instrument Departure the phraseology "Unable to comply with {departure} due {reasons}"

Pilots who cannot comply with Standard Instrument Departures shall advise ATC in good time using the phraseology "Unable to comply with {departure} due {reasons}, so that alternative clearances can be issued.

6.2 Non-Standard Departure Instructions: Pilots who cannot comply with any of the standard instrument departure procedures must inform ATC in good time so that alternative clearances can be issued. A minimum climb gradient of 3.7 per cent applies to all alternate clearances.

6.3 Communications failure procedures for departing aircraft.

Aircraft experiencing communications failure in Shannon CTA/CTR shall set transponder code A7600 and comply with the following procedures:

RFL below **FL**080: Departing traffic cleared by ATC to a level/altitude below the RFL, shall comply with Communication failure procedures as outlined in ICAO Annex 2.

RFL FL080 or above: Departing traffic cleared by ATC to a level or altitude below FL080 shall maintain the cleared level for a period of three minutes following the time the altitude/level is reached and thereafter adjust level and speed in accordance with filed flight plan.

Departing Traffic experiencing a communications failure above FL080 shall comply with communications failure procedures as outlined in ICAO Annex 2

7. Low Visibility Procedures

7.1 Low Visibility Procedures apply when the cloud ceiling is below 200ft (60M) and/or the IRVR is less than 550M.

7.2 Only RWY 24 may be used for CAT II operations. The CAT II holding position on TWY D2 must be used.

7.3 When these procedures are in operation and RWY 24 is in use the following standard taxi route system applies:

- Departing aircraft shall normally use TWY's D1 and D2.
- Arriving aircraft shall normally use TWY A.

7.4 During LVP Operations, LVTOs are permitted from Runway 24. It is at the discretion of the PIC to depart based on their airline operating procedures in LVP conditions. Take-offs are not available in IRVR conditions below 125M. All IRVR readings must show 125M or greater. ATC shall inform departing pilots if and when any IRVR value falls below 125M.

7.5 TWY/Stop-bar/Centreline lighting/Lead on/Lead off will be in use. At **no time** shall an aircraft or vehicle cross an illuminated stop bar and any instruction to do so should be challenged. In exceptional circumstances when the stop bar cannot be extinguished the authorisation to cross the illuminated stop bar may be given by ATS. This shall always be challenged and confirmation received that this instruction is part of a contingency arrangement due to a failure of the stop bar. All aircraft and vehicles operators shall request for the instruction to cross an illuminated stop bar to be reconfirmed by ATS and read back before proceeding.

7.6 Pilots will be informed by ATIS broadcast or RTF when Low Visibility Procedures are in operation

7.7 Full details of Low Visibility Procedures are available on request from Aerodrome Administration (see EINN AD 2.3.1)

7.8 Visual Approach Chart (VAC)

Chart EINN AD 2.24-15 (VAC) provides data for VFR pilots.

Visual Reporting Point (VRP) Holds:

- Bunratty Castle Hold: 524156.74N 0084855.35W (WGS-84). Left-hand pattern, based on Bunratty village. Outbound leg is 1 minute, flown at 120KT TAS. Inbound track 236°M. Minimum holding altitude is 1500ft QNH.
- Coney Island Hold: 524244.87N 0090006.36W (WGS-84). Left-hand pattern, based on Coney Island, Shannon Estuary. Outbound leg is 1 minute, flown at 120KT TAS. Inbound track 056°M. Minimum holding altitude is 1500ft QNH.

Other VRP's: (All co-ordinates WGS-84)

- VRP Gortglass Lough 524104.36N 0090857.89W

EIKY AD 2.20 LOCAL TRAFFIC REGULATIONS

1. Aircraft Taxiing

Pilots should use the minimum power necessary while taxiing. On west apron stands 1 to 5, pilots should operate at the minimum power commensurate with the intended manoeuvre, due to the effect of jet blast on personnel, equipment and buildings.

2. Aircraft Engine Test Runs

Permission for all test runs must be obtained from the ATC

Aircraft engine test runs at idle speed not exceeding five minutes duration are permitted on the west apron stand 1 and stand 2, and on the east apron stand E2 and stand E3 locations as indicated on Kerry aerodrome chart EIKY AD 2.24-1.

Engine test runs up to full power shall take place in the isolated area parking (IAP) location as indicated on Kerry aerodrome chart EIKY AD 2.24-1.

EIKY AD 2.21 NOISE ABATEMENT PROCEDURES

Turbojet aircraft may operate only between the hours of 0730 and 2300 (UTC) during the period 1st October to 31st May. Operation is unrestricted during the period 1st June to 30th September.

EIKY AD 2.22 FLIGHT PROCEDURES

1. Arrival Procedures

Clearance to enter the CTR

Arrival routes may be varied at the discretion of ATC.

Arrival Routes are based on holding patterns established at KER NDB and ROTSO.

Shannon ATS will descend arriving traffic to the lowest usable flight level within controlled airspace (FL 080 / Shannon Transition level if higher).

A lower level/altitude within controlled airspace may be coordinated with Kerry ATC.

Descent into the FIR (Class G Uncontrolled airspace)
Caution: Descent below FL080 or Transition level if higher, before the lateral limits of the Shannon CTA, Kerry Control Zone or associated stubs as outlined in ENR 2.1 will bring the flight into Shannon Class G (uncontrolled) airspace. There may be traffic operating in this airspace that is unknown and not operating with a transponder. Such descent, if requested, may be given at pilot's discretion with a clearance to re-enter controlled airspace at or descending to a specified level/altitude agreed with ATC. Flight information in the FIR is available from Shannon ATS on 127.500MHz

2. Communication Failure

In the event of communication failure, the pilot shall act in accordance with the communication failure procedures in ICAO Annex 2 supplemented by the following:

Traffic departing on Kerry SID SHA3A, SHA3B, SHA3C, SHA3D, CRK3A, CRK3B, CRK3C, CRK3D, KER3A, KER 3B, KER3C & KER3D, experiencing radio communication failure in the Kerry CTR/Shannon CTA shall maintain the maximum altitude specified in the SID for a period of three minutes following the time the altitude is reached and thereafter adjust level and speed in accordance with filed flight plan

3. OMNI-DIRECTIONAL DEPARTURE PROCEDURE FOR RUNWAYS 08/26

RWY	TRACK	A/C Category	Minimum Climb Gradient	Routing
26	256	A,B,C	Minimum Climb Gradient of 6%	Climb straight ahead until 4500ft and then as directed by ATC
08	076	A,B,C	Minimum Climb Gradient of 5.0%	Climb straight ahead until 4500ft and then as directed by ATC

Pilots who cannot comply with any of the SID's or Omnidirectional departure procedures must inform ATC in good time so alternative clearances can be issued.

Terrain

a. Departing aircraft requiring a deviation from there clearance, published SID or Omnidirectional departure, should exercise caution due high ground.

b. Deviation from the published procedures required by departing aircraft will, on request, be approved by ATC "At pilots Discretion". Warning of high ground.

4. Reduced Aerodrome Visibility Procedures and Low Visibility Procedures

Reduced Aerodrome Visibility Procedures are approved for operations on Runway 26 and for Runway 08.

4.1 Reduced Aerodrome Visibility Procedures (RAVP)

Reduced Aerodrome Visibility Procedures come into effect when

A. The IRVR and/or Met Visibility falls below 1500m and/or

B. When all or part of the manoeuvring area is not visible to the Duty Air Traffic Control Officer (DATCO) from the control tower.

The Maximum allowable movement rate on the manoeuvring area when RAVPs are in force is 3 (2 aircraft and 1 vehicle or 2 vehicles and 1 aircraft).

4.2 Low visibility procedures (LVP)

Kerry airport are not approved for low visibility procedures and therefore do not operate in low visibility conditions (LVC)

Where the reported conditions are below the operational minima of RVR ≤550M or height of cloud ≤200ft, Aircraft arrival and departure operations shall be suspended.
